NATIONAL YOUTH DEVELOPMENT AGENCY  
**OUR YOUTH. OUR FUTURE.**

INTEGRATED  
YOUTH DEVELOPMENT  
STRATEGY (IYDS)  
(2022/25)

"Young people should be at the forefront of global change and innovation. Empowered, they can be key agents for development and peace. If, however, they are left on society's margins, all of us will be impoverished. Let us ensure that all young people have every opportunity to participate fully in the lives of their societies."

**Kofi Annan**, Former United Nations Secretary General

## FOREWORD BY THE MINISTER

### Minister of Women, Youth, and Persons with Disabilities

I am happy to present the Integrated Youth Development Strategy (IYDS) for the period 2022 to 2025. This strategy is a product of consultations with all sectors of society, including the youth themselves. Taking a collective and consultative outlook is in keeping with our government's integrated and mainstreamed approach to youth development, and our commitment to improving alignment and coherence in policy development and implementation. With the National Youth Policy (NYP 2020-2030) adopted by Cabinet in October 2020, it was necessary to craft this implementation plan to translate the policy priorities into concrete programmes with budgets, targets, and a monitoring and evaluation mechanism.

The strategy, which is legislated, is also a collective expression of our commitment to improving the lives of our young people. Beyond being an implementation plan for the NYP (2030) and a coordination instrument, this document is also the youth sector's contribution to the national goals of reducing poverty, inequalities and unemployment as expressed in the National Development Plan 2030 (NDP). These goals are at the heart of our development agenda, operationalised through the five-yearly Medium-Term Strategic Framework-(MTSF).

It is vital that we systematically tackle poverty, unemployment, and inequalities, given its negative impact on the future of the country, more especially because evidence show its long lasting huge impact on young people. To handle the above challenges effectively and efficiently, we take a leaf from economists and demographers who underscore the societal value of investing in the youth, and the high returns associated therewith. Fruitful investment in the youth requires a coordinated and measurable plan – the IYDS provides such a plan. We also want to call upon the private sector and civil society, many of whom were consulted when formulating this document, to define niche areas for themselves within the IYDS so that their programmes are aligned to the national development agenda. No nation can achieve its development goals without the involvement of these important sectors. We acknowledge and appreciate the strong working relations we enjoyed with both sectors over the years. We urge all stakeholders to continue to work with us to consolidate the youth development gains made over the last 26 years, which the global economic downturn, fuelled by Covid-19 amongst others, threatens to erode. Let us remember that this is not the Ministry's plan or the National Youth Development Agency (NYDA)'s plan, but it is the nation's plan – we encourage all the sectors to own it and make it a reality.

Only collective efforts can enable us to realise the intentions of this plan. *"Tau tša hloka seboka di šitwa ke nare e hlotša"* (fragmented efforts make less impact). When we adopted an integrated and mainstreamed approach to youth development, we envisaged

a multi-sectoral approach as evident in both the collective crafting and the envisaged collective implementation of the IYDS.

---

Honourable Maite Nkoana-Mashabane, MP  
Minister of Women, Youth, and Persons with Disabilities

## REMARKS BY THE NYDA CHAIRPERSON

The Integrated Youth Development Strategy (IYDS) seeks to provide a guide on how the NYP 2030 will be implemented. The youth sector has identified roles of all key players and provided a strategy for engagement, enabling partners to work together in a complementary and supportive manner.

The strategy seeks to enhance the participation of young people through targeted programmes initiated by government, business, and civil society. The Integrated Youth Development Strategy will create a framework within which all youth related work in South Africa can be coordinated and linked, to build relationships, foster information-sharing, avoid duplication and ultimately maximize impact.

The adoption of the IYDS is a definite action to move both theory and policy to action in an integrated fashion. It will endeavour to ensure buy – in and cooperation from key players in public, private and civil society sectors across the three spheres of government in the implementation of this strategy. Successful implementation can only be attained if all those involved work together and allocate resources towards implementation thereof.

Most importantly the strategy will give responsibility to young people to take charge of their own development. A detailed programme of action from the strategy will enable youth to see themselves as key contributors to the success of the countries development trajectory as set out in the National Development Plan (2030). The strategy affords us an opportunity to set a futuristic agenda for the South Africa’s youth. This strategy goes a long way in bridging the gap between policy and implementation.

It is essential to note that this document sets out how government, working with communities, public sector, labour, civil society and private sector, will ensure support of young people through amongst others: development of skills and attitudes that enable them to positively contribute in development of their society, now and in the future. This is an important step in the right direction which would shift our thinking from focusing on youth problems, to understanding them as partners and contributors. This strategy provides a plan on how this can be attained.

---

**Ms Asanda Luwaca**  
Chairperson of the NYDA Board

## EXECUTIVE SUMMARY BY NYDA CHIEF EXECUTIVE OFFICER

Youth development is backed by comprehensive policy and legislative frameworks, such as: the Constitution of the Republic of South Africa Act no. 108 OF 1996' the NYDA Act no.54 of 2008; the National Youth Policy (NYP) 2020-2030; and the Integrated Youth Development Strategy (IYDS). There are also supportive policies and legislation including, but not limited to the Broad Based Black Economic Empowerment Act No. 53 of 2003; Employment Equity Act No. 55 of 1998; the Preferential Procurement Policy Framework Act no. 5 of 2000; the Skills Development Act No. 97 of 1998 and their amendments. Important to note is that the NYP 2030 was developed and approved by Cabinet and the IYDS will serve as an implementation plan for NYP (2030). It is the youth sector's contribution to the development goals expressed in the National Development Plan (NDP) and in the Medium-Term Strategic Framework (MTSF). The IYDS sets out the actual programmes, targets as well as the resources required for driving identified interventions.

The strategy builds a case for interventions by providing a brief overview of the current challenges facing the youth. It starts with a brief overview of the youth population (i.e., those aged between 15 and 34 years), which constitute about 35,7% or 20,6 Million of the 57,7 Million South African population. The youth population is projected to reach about 62 million by 2023 and grow to 63 to 66 million by 2025. This would just be over two thirds of the youth population, who live in Gauteng, KwaZulu-Natal, and the Western Cape. Slow economic growth compounded by current global economic challenges, makes it difficult for the youth to participate optimally in the economy and in society in general. Young people bear a disproportionate burden of poverty and unemployment. The poverty rate among children aged 0-17 years is at 63%, followed by 58,6% for those aged between 18 and 24 years, and then at 47,1% for those aged between 25 and 34 years. For the over 35-year-old population, the rate is averaging at 42%. In addition, just over 24% of youth-headed households in South Africa are classified as low-income households.

Unemployment is also at its highest amongst the youth aged 15-25 years (63,9%), who are more likely to be unemployed, compared to those age 26-35 years (42,1%). These unemployment figures are above the national unemployment rate of 35,3%. Congruently, labour absorption rates are low amongst the youth and lowest for the age category 15-24 years. The most concerning trend is the consistent increase in unemployment in the last few years. Compared to those who reach other levels of education, the graduates are least likely to be unemployed, with their rate being at 8,4% unemployment rate. It is hard for job seekers to look for employment as they often cannot afford to pay for the attached costs (printing, travel etc.). Currently, about 3,3 Million of the youth aged between 15 and 24 years are not in employment, education, or training (NEET). Entrepreneurship, which is seen as a possible avenue of increasing economic growth and dealing with poverty and unemployment, is not satisfactorily entrenched amongst the youth in this country. Measured by GEM Entrepreneurship Spirit Index (GESI) and Total early-stage entrepreneurial activity (TEA), entrepreneurship levels in South Africa are lower than the African averages and the rest of the world. Within the country, youth ownership of

business is low compared to age category 35 to 54 years. High failure rate of youth start-ups businesses is associated with amongst others, funding challenges and limited access to markets. Less than satisfactory educational outcomes, exacerbates the situation. Set asides in procurement have an important role to play in supporting youths' businesses. However, financial education is important for youth wealth accumulation - the level of financial literacy in South Africa is very low at 54% and this has not improved in the last five years.

Access to quality health care for the majority is also a challenge. In this regard, the government is trying deal with this through National Health Insurance (NHI), the impact of which, is still to be seen. Socio-economic challenges are escalating the mental health issues amongst the youth – notably depression. For instance, those who lost their employment because of Covid-19, have 23% chance of being affected by anxiety and or depression compared to those who are still employed at 14%. Anxiety and depression are linked to suicides. High HIV and AIDS prevalence is still a big challenge for the youth, and research showed that HIV and AIDS is leading cause of death. The high prevalence and spread amongst the youth are exacerbated by risky behaviour, mainly associated with substance abuse.

In light of the foregoing, it is clear that unhealthy lifestyles and obesity need attention with 17,3% of young women in the age category 25-34 years identified as being severely obese, compared to young men in the same age categories at 2,3%. More worryingly is that these unhealthy lifestyles contribute to chronic illnesses such as hypertension, heart diseases, diabetes, certain cancers and recently linked to high Covid-19 mortality. Whilst most youth face challenges, young women are disproportionately affected by the challenges that include less economic opportunities and gender-based violence, which is rising rapidly with an increase of about 37% between 2019 and 2020. Femicide is also on the increase. The true picture of GBV is hidden by under reporting and less attention to males affected by the phenomenon. Limited research data on youth development is a cause for concern as it affects planning.

All the challenges highlighted in the youth development space are classed, racialised, genderised, regionalised, and tend to be ableist because of historical reasons. This requires nuanced interventions that take this into account. Covid-19 has not only precipitated and exacerbated the loss of lives and livelihoods, but it has also brought to the surface the enormous inequalities in the country. It has also impacted all aspects of young people's lives including their ability to participate in public affairs. Structured around the five pillars of the NYP, the second part of this document provides detailed programmes with targets and the key players.

---

Chief Executive Officer,

Waseem Carrim

## Vision

An integrated, holistic, and sustainable approach towards youth development that contributes to the growth and development of South Africa's youth.

## Mission

To Facilitate youth development with all sectors of society through collaboration in support of youth development across the country.

## Values:

The IYDS promotes the following values:

- **Change agents.** Young people are instruments and agents of their own development. Young people should be considered as agents of change, not passive recipients of government services.
- **Inherent worth and dignity of youth.** The provision of services should reflect respect for the worth and dignity of young people. Young people should be supported to develop their inherent strengths and potential.
- **Moral regeneration.** The promotion of moral and spiritual regeneration in line with the values of Ubuntu and the ethic of care.
- **Social beings.** Young people are social beings who belong to a range of significant networks at local, national, regional and global levels. It is critical that these networks are strengthened since they serve as essential support systems to young people's development and empowerment and are intentionally youth-focused in effectively addressing their needs.
- **Youth empowerment.** Interventions should empower young people as assets for national development, raising their confidence so that they can contribute meaningfully to their own development and that of the broader society

## The objectives of the IYDS

The objectives of the IYDS framework are to:

- provide a partnership and stakeholder engagement framework, enabling public sector, private sector and civil society engagement.
- lobby all government sectors to create a more youth-friendly, supportive regulatory environment
- facilitate programmes aimed at job creation and economic security of youth in government, business, and civil society organisations.
- initiate catalytic programmes designed to benefit youth from disadvantaged backgrounds (primarily youth from rural areas and townships, youth with disabilities, and young women) co-ordinate youth focused programmes across all sectors of government and industries to align resource allocation.
- provide a monitoring and evaluation framework and system which will enable co-ordinated nationwide tracking of youth development programmes implemented by public, private and civil society organisations.

## Strategic focus areas and implementation framework

Given an analysis of the major factors impacting on youth currently, the NYP 2030 identifies five policy imperatives and proposed areas of intervention, which are captured below, as the five Strategic Focus Areas:

1. **Education, skills, and second chances** – covers basic education, higher education and training, and skills development, and the links between education, skills, and economic opportunities.
2. **Economic transformation, entrepreneurship, and job creation** – covers youth participation in the labour market and youth entrepreneurship.
3. **Physical and mental health promotion including pandemics** – covers mortality and morbidity, health behaviour and practice, HIV prevalence, pregnancy, nutrition, obesity, and other primary healthcare issues. In addition, it covers substance abuse.
4. **Social cohesion and nation building** – covers youth participation in social development and related activities in communities, including participation in political processes, sports, youth leadership, and youths in conflict with the law
5. **Effective and responsive youth development machinery** – provides an overview of institutions that play an important role in youth development

## Target Groups

Young people are not a homogenous group since they are diverse and have diverse needs. In the same manner, there should be equally varied, and unique interventions designed to address those needs. It is crucial therefore, that mainstream policies and programmes across all different sectors should work synergically if the needs of young people are to be effectively addressed.

This strategy recognises various challenges facing youth from diverse backgrounds. It also acknowledges that problems experienced by individual categories of targeted youth groups are unique and multifaceted and require involvement of various service-providers across different sectors. Therefore, it would be important to identify the broad categories of targeted youth groups requiring specialised and tailored interventions. They include, but are not limited to the following:

- Young women
- Young men
- Youth in secondary school
- Youth in tertiary institutions
- School-aged-out-of-school youth
- Unemployed youth
- Youth in the workplace
- Youth from poor households
- Youth from different racial groups
- Teenage parents
- Orphaned youth
- Youth heading households
- Youth with disabilities

- Youth living with HIV and Aids and other communicable diseases
- Youth in conflict with the law
- Youth abusing dependency-creating substances
- Homeless youth living on the street
- Youth in rural areas
- Youth in townships
- Youth in cities
- Youth in informal settlements
- Young migrants
- Young refugees
- Youth who have been or are at risk of being abused.

The Strategy, while emphasising the development of all youth, acknowledges the reality of limitation of resources and as a result prioritises those efforts and interventions should give second chance to the most marginalised and excluded youth groups. Of the stated categories, this strategy argues that immediate attention should be given to the following prioritised youth target groups:

- Youth heading households
- Youth in business
- Youth with disabilities
- Out-of-school youth
- Unemployed youth
- Youth abusing substance

However, these sectors are not necessarily exhaustive nor mutually exclusive, so the importance of segmentation is to craft specific intervention for each cohort, not to compartmentalise youth cohorts. An important point about developing interventions is to constantly look at what exists, and what works, rather than start from scratch every time. In other words, evaluation and impact studies are necessary.

## **Background**

## 1. Background

In consultation with the youth and the relevant stakeholders, the democratic state took a mainstreamed and integrated approach to youth development. Appreciating the cross-cutting nature of youth development and its complexities, the approach frames youth development as a societal imperative, where all sectors of society are required to take responsibility and to contribute meaningfully. Furthermore, the approach sees the youth as active partners in development as opposed to a deficit conception of the youth that sees young people as a problem needing unilateral intervention. The choice of an integrated and mainstreamed approach culminated in the enactment of the National Youth Development Agency (NYDA) Act. No.54 of 2008, which established the NYDA whose purpose is, amongst others, to coordinate youth development. To fortify the mainstreamed and integrated youth development approach, the act stipulates that, all state organs are required to “take national priorities in respect of youth development into account in planning their activities”<sup>1</sup>.

More directly, the act provides for the development of an Integrated Youth Development Strategy (IYDS), intended to ensure that policy priorities are translated into plans, budgets, and targets. The strategy provides an all-sector programme of action for youth development. It also provides a platform for the state organs to fulfill the legal requirement of factoring youth development in their planning, and it fosters a uniform approach to youth development. At the same time, the IYDS will forge partnerships and alignment with other government interventions, and it also enables the NYDA to leverage and harness resources for youth development from other state organs, the private sector and civil society. Alignment and leveraging of resources, partly deal with what the Medium-Term Strategic Framework (MTSF) (2019-2024) noted as one of the limitations in government - “lack of coherence in government and poor coordination among departments”<sup>2</sup>.

Crafted in consultation with relevant stakeholders, this document serves as an implementation plan for National Youth Policy (2030) approved by the Cabinet of the Republic. Led by the Ministry of Women, Youth and Persons with Disabilities, as the executive authority responsible for youth development, and building on previous NYPs, the NYP (2030) sets out youth development priorities, which are to be implemented through this IYDS. In short, the NYP and the IYDS are the concrete expression of an integrated and mainstreamed approach to youth development – they give the approach an action face or take it beyond a bark to a bite. As the Commonwealth pointedly asserts “the litmus test of development is whether [mainstreaming] has a transformative effect on women and young people”<sup>3</sup>.

## Mapping Youth Development

## 2. Mapping youth development

The NYDA Act No. 54 of 2008, declares that “youth development is central in the reconstruction and development of South Africa”<sup>4</sup>. This declaration implies the need to put the youth at the center of development. It is also an appreciation that investing in young people is not only important because the youth constitute a substantial proportion of the population, but because it is fundamental for the country’s political and socio-economic sustainability and stability. Furthermore, the returns of investing in the youth have been illustrated by economists and demographers to be higher through the demographic dividend and therefore more beneficial to the whole country. Demographic dividend is an economic benefit derived when the productive and economically active population is more than the dependent population. The economic gains derived manifest through positive spin-offs such as better government revenue, better health, better education, better social cohesion, and more stability. However, demographic dividend is not automatic. For any country to benefit from it, young people need to be empowered with opportunities and the requisite skills to participate meaningfully in society. Most importantly, all sectors should create an enabling environment that encourages the youth to develop their talents and to take up available opportunities. This is where a coordinated intervention in the form of the IYDS, informed by research and consultations with all sectors, becomes crucial.

This section is intended to paint a brief picture of the current situation of young people and therefore to motivate for the interventions to be specified later in this document. The South African 25-year Review and the National Youth Policy (2030), amongst others, have eloquently catalogued many of the positive achievements since the advent of democracy. So, in this document, the focus is on highlighting areas that still need attention. As a starting point, a brief overview of the youth development policy framework will be provided.

### From a 25<sup>th</sup> Year Review Perspective

It was decided that to further support the mainstreaming activities, certain youth institutions should be established to work with government and other social partners to facilitate youth empowerment. Government and its key stakeholders to develop recommendations relating to any other matters that may affect the youth.

One of the challenges of youth development is the fact that most youth development activities are actually embedded in the overall programmes of government. Thus, mainstreaming youth development is now the biggest task.

### 2.1 Youth Development policy framework

There has been increased recognition globally that investing in young people is key to the development of nations. For many nations, youth development is no longer about focusing on small groups of marginalized youth, it is about the youths as co-

---

<sup>4</sup> Republic of South Africa (2008: 2)

conceptualisers and co-drivers of development. Multilateral organisations have come on board by developing instruments to support youth development. Amongst other international initiatives, the United Nations (UN) Secretary-General Envoy on youth was established in 2013. Youth development instruments like UN World Programme of Action for youth, and the Commonwealth Plan of Action for Youth Empowerment were adopted for nations to strengthen their youth development agendas.

At the continental level, the African Union (AU) adopted the African Youth Charter in 2006, which South Africa ratified in 2009. The Charter was informed by the expressed intention of African Union's Constitutive Act and the African Union Commission strategic plan 2004-2007 to put African youth at the centre of development. Beyond recognising the importance of holistic and coordinated approach to youth development, the Charter prescribes that nations should develop comprehensive and coherent national youth policies. Signatories to the Charter are required to provide resources for the youth policies to be implemented. This signals a shift from merely stating the youth development intentions in public platforms to making them part of public policy and backing them with budgets. In addition, the African Union has endorsed youth development through encouraging investment in the youth to harness demographic dividend as a key to Agenda 2063 for the benefit of the continent. One of the priorities of Agenda 2063 is to engage and empower youth and children.

South Africa, having considered the international, the continental instruments and its own developmental idiosyncrasies, established its own youth development policy framework. From the Constitution of the Republic of South Africa, Act, no. 108 of 1996 to the Integrated Youth Development Strategy, there is recognition that youth development is central to the stability and sustainability of the country. Central to the Constitution is the notion of human rights underpinned by individual rights and the need to redress the past injustices. The Constitution also provides for socio-economic rights like education, health, and the right to livelihood. These rights are important for youth development. The imperative of redress is further articulated in amongst other legislation, the Promotion of Equality and Prevention of Unfair Discrimination Act, no.4 of 2000, Broad Based Black Economic Empowerment Act 53 of 2003, Employment Equity Act No. 55 of 1998, the Preferential Procurement Policy Framework Act 5 of 2000, and the Skills Development Act 97 of 1998.

The merger of Umsobomvu Youth Fund (UYF) and the National Youth Commission (NYC) was intended to strengthen the youth development machinery by minimising fragmentation. This desire to limit fragmentation culminated in the National Youth Development Act, no. 54 of 2008, which established the NYDA to lead youth development and to play the role of a coordinator. The Act provides for development of the National Youth Policy, of which to date two (NYP 2009- 2014 & NYP 2015-2020) have been developed, implemented, and reviewed to give birth the recently adopted NYP (2030). To promote collective responsibility in youth development and to engender

uniform approach, the NYP is intended to set youth development priorities in consultation with all sectors of society. On the other hand, the IYDS provides a national implementation framework for the NYP and a monitoring and evaluation mechanism (for detailed exposition of relevant policies and legislation see appendix A).

## 2.2 The National Development Plan and youth development

Successive macro-economic policies that were adopted by the post-apartheid state, including Growth, Employment and Redistribution (GEAR), and the New Growth Path (NGP), to facilitated economic growth and by extension youth development. Informed by successive macro-economic policies, the NDP 2030, which, attempts to put the policy and legislative wishes into a plan with timeframes, was adopted in 2012. Youth development is foregrounded in the document through emphasis on education, and youth economic participation. The goals of the NDP, which are to reduce poverty, inequalities and unemployment are operationalized through the MTSF, which is intended to be a national implementation framework. The IYDS, flowing from the NYP, locates youth development programmes into the MTSF.

Amongst the challenges noted in the NDP include unequal and racialised access to opportunities including poor schooling quality and outcomes for the black youth. Limited economic participation is also an important area identified in the NDP. Using the 'youth lens', the NDP emphasizes amongst others, the improvement of the following (which inform the five pillars of youth development):

- i. Economic growth (including building the capacity of the state to play a developmental role)
- ii. Improve access to health care (including nutrition for pregnant women and young children)
- iii. Quality of education and skills development (including universal access to Early Childhood education (ECD))
- iv. Economic opportunities for youth and women (including creation of employment and support for entrepreneurship)
- v. Active citizenship and social cohesion (including dealing with inequalities)

The multidimensional approach of the NDP and its acknowledgement that the youth and women should be integrated in all interventions lays the ground for a multidimensional and integrated youth development espoused in the IYDS. Following the devastating impact of Covid-19, the government has crafted the Economic Reconstruction and Recovery Plan, to supplement the developmental efforts encapsulated in NDP. The South African Economic Reconstruction and Recovery Plan emphasises the inclusion and foregrounding of women and young people in all economic activities.

### 2.3 South African Economic Reconstruction and Recovery Plan

The Economic Reconstruction and Recovery Plan is intended to stimulate the economy to create more opportunities with the youth and women given priority. The plan sets out a bold vision and immediate actions to stimulate an economic rebound and to build the economy of the future. Intended to bring together the work of government departments, the Economic Recovery Action Plan was agreed to by social partners at National Economic Development and Labour Council (NEDLAC) and with contributions from the Presidential Economic Advisory Council. The priority of the economic recovery strategy is to get the economy to start growing to create decent economic opportunities through entrepreneurship and employment opportunities. While the economic recovery takes root, there is a need to expand public employment and other measures to retain existing jobs in a context in which markets will take time to replace the jobs that are lost as result of the current economic downturn. In addition, the intervention is intended to support livelihoods and provide economic opportunities in this harsh economic environment.

Young people are already stepping up as entrepreneurs in many sectors. They need support that include access to capital to start and grow businesses. Innovative financial and loan instruments which move beyond the current predominantly asset-based collateral requirements are needed to facilitate access to finance. It is important for both the public and private sectors to also provide other business-related support. Education or vocational training can equip young people with the skills necessary for future jobs and economies. For instance, enhancing education in areas related to the demands of the digital economy could improve the quality of the workforce and enterprises. These interventions are part of the South African Economic Reconstruction and Recovery Plan that are aimed at promoting greater participation by black people, women, youth and persons with disability at all economic levels. This will be done as part of transforming

patterns of asset ownership and income distribution in our society. The government will ensure effective gender mainstreaming in all aspects of the plan, through the participation and mobilization of young people, especially young women. This includes such mechanisms as the 40% set aside for women in public procurement, legal remedies to close the gender pay gap, women's participation in key economic sectors, access to assets such as land, and women's financial inclusion and empowerment.

In the infrastructure-built programme, South African companies and building materials will be used, as well as labour intensive construction methods; placing emphasis on skills transfer. This has potential to increase the empowerment and inclusion of young people, women and persons with disability. Small-, Medium- Macro-Sized Enterprises (SMMEs), especially those run by the young people, women and persons with disability will play a significant role in the delivery of the infrastructure necessary to facilitate economic recovery and reconstruction. Young people, women and persons with disability will be encouraged and supported to form cooperatives in key economic sectors such as retail, agriculture and Agro-processing, financial services (Cooperative Financial Institutions), manufacturing and infrastructure development. In addition, young people, women, and persons with disability will be prioritized in accessing funding for initiatives that will drive the recovery and reconstruction effort.

## 2.4 Presidential Youth Employment Intervention

Youth unemployment is a national crisis that demands urgent, innovative and coordinated solutions. The Presidential Youth Employment Intervention (PYEI) is a direct response to the challenge that too many young people are not transitioning from learning to earning.

Of the 1.2 million young people entering the labour market each year, more than 65% remain outside of employment, education and training. Those young people who manage to access opportunities tend to zigzag on often broken pathways, falling in and out of education and short-term work so that they cannot realise their potential and get a foothold in the economy.

President Ramaphosa has made addressing this crisis one of his foremost priorities. A growing youth population should not be a threat to South Africa but rather its greatest source of potential. Young people hold the key to transforming our economy, boosting growth and fostering creativity and innovation. They are essential to increasing productivity and improving the livelihoods of all South Africans.

Therefore, the Presidency has established a Project Management Office (PMO) to coordinate and drive an integrated plan to create two million new jobs for young people during the next decade, over and above, average job growth. This plan aims to expand the range of opportunities available to young people – whether in further education and training, skills development, employment, work experience, entrepreneurship, or youth service – so that we can work towards a South Africa in which every young person has a place to go.

The depth and persistence of youth unemployment and its structural nature are such that minor projects and isolated initiatives will not make a meaningful difference. Therefore, effective solutions must support and give prominence to what is working in the system, encourage innovation, and catalyse changes in the system that benefit millions – not hundreds or thousands of young people over the next decade.

#### **2.4.1 Five key interventions over five years**

The Presidential Youth Employment Intervention is the government's plan to address this challenge. It is designed to effectively transition young people into the labour market, significantly reducing the high rate of youth unemployment. It is intended to coordinate, enhance, and scale up existing programmes across government and through close partnerships with the private sector. Bringing together a wide range of partners within and beyond government is the largest and most comprehensive plan to address youth employment in South Africa's democratic history.

To pursue this objective and to unlock the energy and potential of young people, we will implement five priority actions over five years to catalyse long-term change:

- a) **Building a national Pathway Management Network** for young work-seekers to view and access available learning and work opportunities and receive a range of support services and work readiness training to help them navigate into employment and other economic opportunities. Young people will receive a basic support package in person, online and over the phone, complete online assessments and training and be matched to a wide range of opportunities.
- b) **Implementing agile, demand-led workforce development programmes** that allow young people to develop the capabilities required to pursue new opportunities in growth sectors such as global business services, digital and technology, tourism, agriculture and social services over five years, and support those sectors to expand. This will be achieved through short learning interventions matched to actual demand in the economy, in partnership with DHET, SETAs, the NSF, sector bodies and the Public-Private Growth Initiative.
- c) **Supporting the township and rural economy** by creating inclusive markets in opportunity areas such as the food economy, the green economy, health and education. To enable self-employment and enterprise, the focus will be placed on systemic enablers such as connectivity, public infrastructure and market access – in addition to the direct enterprise support and financing provided by DSBD and its agencies.
- d) **Providing opportunities for workplace experience** through the Youth Employment Service and ensuring that every student enrolled in TVET colleges can access work-integrated learning to complete their qualifications and enter the workplace.
- e) **Revitalising the National Youth Service** to create opportunities for young people to meaningfully contribute to their communities, develop critical skills required to participate effectively in the economy, build confidence and expand their networks and social capital. A Presidential Youth Service programme will channel young people's energy into advancing social cohesion, nation-building and development.

#### 2.4.2 Focus on implementation

The plan will be supported by the Project Management Office (PMO) in the Presidency, managing delivery and performance, working closely with implementing departments and agencies. This will allow for a clear line of sight and reporting to the President on implementing key priorities coordinated by the Presidency. A working group has been established, drawing in leading experts from government departments, the private sector,

social partners and young people, which has developed work streams for each pillar of the plan.

What makes this intervention different from past government programmes? The implementation of this plan is guided by five core principles, which ensure that it will improve outcomes and achieve a grander scale:

1. The intervention builds on existing policies, plans and agreements and focuses on addressing gaps in the policy landscape,
2. It is driven from the Presidency and coordinated by the Project Management Office to ensure effective accountability for implementation,
3. It brings together a wide range of partners and breaks down silos between government departments, between the levels of government, and between government and the private sector,
4. It is designed around young people and is responsive to their needs and concerns, and
5. It addresses constraints to job creation on both the supply and demand side by maximising the allocation of resources.

The overriding focus will be on rapid and effective implementation. The coordinating and convening power of the PMO – with authority to act quickly to unblock bottlenecks and facilitate necessary interventions – will ensure that the plan's objectives are met.

### 2.4.3 Targeted outcomes

During the first five years of the programme, the following key outcomes will be achieved:

- Three million young work-seekers between the ages of 15 and 35 will have engaged in a National Pathway Management Network and accessed services to help them grow their employability and identify and pursue work opportunities,
- Approximately 1.5 million temporary, paid work opportunities will have been created (including one million work-based placements, 250,000 work-integrated learning opportunities and 250,000 service opportunities), and
- Approximately 500,000 young people will be engaged in sustainable work opportunities through workforce development programmes.

## 2.5 The NYDA: The road travelled

The NYDA, which was established in terms of the NYDA Act no.54 of 2008 plays a leading role to ensure that all major stakeholders such as the government, private sector and civil society, prioritise youth development and contribute towards identifying and implementing long-lasting solutions that address youth development challenges. The agency is a result of the merger of the National Youth Commission (NYC), which focused on policy development and Umsobomvu Youth Fund (UYF), which focused on programme to co-ordinate youth development activities, design and implement programmes. The rationale was to minimise fragmentation and to underscore that policy and implementation are intertwined. Furthermore, the NYDA designs and implements programmes that are aimed at improving the lives of young people, as well as avail opportunities to youth. These programmes could be clustered as follows:

- **Individual (Micro) level:** The NYDA provides direct services to youth in the form of information provision, career guidance services, mentorship, skills development and training, entrepreneurial development and support, health awareness programmes and involvement in sport.
- **Community (Meso) level:** The NYDA encourages young people to be catalysts for change in their communities through involvement in community development activities, social cohesion initiatives, National Youth Service programmes and social dialogues.
- **Provincial and National (Macro) level:** Through its policy development, partnerships and research programmes, the NYDA facilitates the participation of youth in developing key policy inputs, which shape the socio-economic landscape of South Africa.

Initially the agency did policy, research, and designed programmes in education, health, and economic participation, including providing enterprise finance. In 2013 the strategy changed to provide micro-finance grants for survivalist youth entrepreneurs. It also provides co-operative grants. The grant finance starts from R1 000 to a maximum of R200

000 for any individual or youth co-operative, but for agriculture and technology-related projects, the maximum amount is R250 000.

Young people whose business ideas qualify for the Grant Programme, depending on their individual needs, also receive some of the NYDA's non-financial support services that include:

- Mentorship
- Business Consultancy Services
- Market Linkages
- Business Management Training Programme and Co-operative Governance training

In 2016, there was a scaling down on the policy and research function of the agency and gradually shifting the policy role to the executive authority. Currently, the agency focusses on coordination and programmes implementation with Grant Programme as a flagship.

### **2.5.1 Lessons Learned by the NYDA**

As a coordinating and implementing agency, the NYDA has learned many lessons from its operations. Amongst the lessons is that the co-ordination role is hamstrung by limited powers provided by the legislation to enable coordinate. In other words, it is difficult to co-ordinate state organs if the existing legislation does not unequivocally empower the NYDA to do so. Now most of the co-ordination depend on the goodwill of the state organs. Secondly, implementation role is limited by small budget allocation and only a few youths can be reached through the NYDA programmes. The intention of the agency was to upscale the programmes through relevant department, which also depends on the positive response from the targeted department.

### **2.5.2 Amendment of the NYDA Act**

The NYDA Act No.54 of 2008 is currently being amended. The Act is being amended to strengthen the Agency's operations; enhance governance; and promote visibility for access of the agency's products and services. It would further clarify the mandate of the

NYDA in relation to that of other key players within the youth development space. It is envisaged that this would make the agency to be more focused and maximise the impact of its services.

## 2.6 NYDA and Department of Women, Youth and Persons with Disabilities (DWYPD)

NYDA and DWYPD have agreed on a shareholder's compact – a relationship mainly exists between the Youth Branch and NYDA. Youth Branch is responsible for Youth Policy while NYDA is responsible for strategy implementation. To strengthen this relationship, the Youth Branch is invited to attend NYDA strategic sessions and Audit Committee meetings to provide input to the Annual Performance Plan and the Five-Year Strategic Plan.

DWYPD is responsible for sharing policy information as it relates to all vulnerable groups so that such information can be used in the design of youth programs. In addition, the NYDA works with many government departments to scale up the implementation of youth programs. These programs include youth entrepreneurship, jobs and skills development programs and National Youth Service (NYS) programs.

The collaboration should be strengthened to ensure effective and efficient machinery for coordination by:

- i. Ensuring that the NYDA and DWYPD jointly develop interventions to combat gender base violence (GBV) and other social ills that impact negatively on the youth.
- ii. Ensuring public participation activities are implemented that included all sectors (women, youth, persons with disabilities). This is guided by a Standard Operation of Practice Document which outlines the value chain on DWYPD stakeholder coordination.
- iii. Identifying key joint priorities and plan collaboratively to implement related initiatives. For instance, upscaling existing programmes such as TECHNOGIRLS, which aims to improve the pass rate of girls studying Mathematics, Physical Science and Technology, and consider initiating new programmes.
- iv. Institutionalise and implement a youth responsive planning, budgeting, monitoring and evaluation across government departments.
- v. Strengthen the national youth machinery through encouraging the appointment of youth focal points in government departments.
- vi. Sharing good practices and expertise and to promote implementation of gender responsive programmes. Other areas of co-operation include:
  - Inter- Governmental Relations.
  - National Youth Services Programmes.
  - Integrated Youth Development Programmes.

### *Young Women*

The concept of empowerment of women is essentially the process of upliftment of economic, social and political status of women, the traditionally underprivileged ones, in the society. It is the process of protecting them against all forms of violence. Women

empowerment involves the building up of a society, a political environment, wherein women can breathe without the fear of oppression, exploitation, apprehension, discrimination, and the general feeling of persecution which goes with being a woman in a traditionally male dominated structure.

Women's empowerment is very essential for the development of society. Empowerment means individuals acquiring the power to think and act freely, exercises choice and fulfil their potential as full and equal members of society. As per the UN-Women, the term women's empowerment means:

- a) Acquiring knowledge and understanding of gender relations and the ways in which these relations may be changed.
- b) Developing a sense of self-worth, a belief in one's ability to secure desired changes and the right to control one's life.
- c) Gaining the ability to generate choices exercise bargaining power.
- d) Developing the ability to organize and influence the direction of social change, to create a more just social and economic order, nationally and internationally.

Thus, empowerment means a psychological sense of personal control or influence and a concern with actual social influence, political power, and legal rights. It is a multilevel construct referring to individuals, organizations and community. It is an international, ongoing process cantered in the local community, involving mutual respect, critical reflection, caring and group participation, through which people lacking an equal share of valued resources gain greater access to the control over these resources

## 2.7 Youth demographics

For youth development planning to be properly targeted and to have a desired impact, it is important that it is informed by an analysis of the population dynamics. This dictates that we look at the current population situation and the future population projections. South Africa, like many African countries, is a youthful country with about 65% of the population aged 35 years and below. This suggests that it is not too late for South Africa to benefit from a potential demographic dividend.

In 2020, the South African population was estimated at 59,62 Million with females at 51,1% or (30 493 475) slightly higher than males (29 128 875)<sup>5</sup>. Out of the 59,62 Million about 20,66 Million or 34,7% were young people aged 15 to 34 years. It is projected that the South African population will reach about 62 million by 2023 and then about 63,66 Million by 2025, a consideration that should be factored into our planning. **Figure 1** below shows the 2020 population estimates spread by age categories and sex. It also shows that most of the youth are in the age categories 25-29 years and 30-34 years compared to ages 15-19 and 20-24 years. Those who are 15 years old and below constitutes about 29% of the current population estimates, which suggests that all things being equal, another youth bulge can be expected in the next few years. The key point here is that youth are at various stages of development in their lives and as such their needs cannot be and should not be treated as homogeneous.

**Figure 1: South African population estimates by age and gender (2020)**

Source: Stats SA 2020 Mid-year population estimates

Figure 2 below shows the percentage distribution of people with disabilities by age categories – showing that 7,7% of the South African population is composed of persons with disabilities. Out of this total, 2,4% are youth aged 15-24 years and 3% of those aged between 25 and 34 years

<sup>5</sup> StatsSA (2020) Mid-year Population Estimates

**Figure 2: Distribution of people with disabilities by age groups, 2016**

Source: StatsSA (2016) Community Survey

Figure 3 below shows the youth population estimates by province, age, and sex. Over two-thirds of our youth live in Gauteng, Kwa-Zulu Natal, and the Western Cape. In line with provincial population distribution, the Northern Cape has the lowest number of youths and Gauteng has the highest number. Although for the youth, the total males are slightly more than the total females, the provincial distribution by sex do not show significant differences.

Figure 3: Youth population estimates by province, age and sex (2020)

Source: StatsSA 2020 Mid-year population estimates

Having outlined the legislative framework and the population structure of young people, the following section deals with challenges in each area identified under the NYP pillars to provide context to the programmes proposed in this document.

## 2.8 Current challenges: Pillar 1 Quality education, skills and second chances

### Deep dive

#### *Access to basic education and exit points*

South Africa has done extremely well at providing access to education for young people but less so at ensuring the completion of basic education. Estimates indicate that between 50 – 60% of young people who start Grade 1 will not finish their matric qualification.

The Stats SA General Household Survey indicates the following in terms of education: Although educational attendance has improved, outcomes are not ideal and access to postschool education is limited. There were approximately 14,2 million learners at school in 2018. Participation in education institutions was virtually universal (97,4%) by the age of 15 years (the last compulsory school age) and approximately three-quarters (74,5%) of learners were still in school by the age of 18 which usually represents the age at which learners exit grade 12. A notable percentage of learners, however, remained in primary and secondary schools long after they should have exited those institutions. Almost one-quarter (24,7%) of twenty-year old's were, for instance, still attending secondary school.

While two-thirds of learners attend no-fee schools, lack of money still contributes to dropping out. The percentage of learners that attended no-fee schools increased from 21,4% in 2007 to 67,2% by 2018. Almost one-quarter (24,2%) of learners who have dropped out of school before the age of 18 years, however, put forward a lack of money ('no money for fees') as the main reason. Other reasons included poor academic performance (22,9%), family commitments (7,9%) and a feeling that education is useless (7,5%).

Educational attainment however continues to improve. The percentage of individuals aged 20 years and older who did not have any education decreased from 11,4% in 2002 to 4,5% in 2018, while those with at least a grade 12 qualification increased from 30,5% to 45,2% over the same period. Inter-generational functional literacy has also decreased markedly. While 57,8% of South Africans over the age of 60 years did not at least complete a grade 7 qualification, this figure dropped to only 4,4% for those aged 20–39 years of age. Less than six per cent (5,5%) of adults over the age of 20 years were considered illiterate.

It is our viewpoint that although the Grade 9 as an exit point generated a lot of controversy it is an important conversation. We hold the view that all young people must have a pathway and the pathway should support multiple exit points. Therefore, an exit point must exist at both Grade 9 and Grade 10 level and that there must be sufficient synergy from the Departments of Basic and Higher Education that young people who do choose to leave the system are transitioned effectively into the Higher Education system or at a minimum pursue short to medium skills development which enhances their employability and thus reduces the number of young people lost to the system.

Furthermore, public education should move towards being completely free – lack of money cannot be the main reason why young people drop out of the system. The Department of Basic Education has an obligation to understand why public schools are still charging fees and should either better subsidise these schools or support learners who cannot attend for financial reasons.

### ***Psychometric testing and career guidance***

To support less drop out due to poor academic performance, psychometric testing should be introduced from Grade 8 onwards and should support a student's choices in Grade 9 that allow them to study subjects which are aligned to their strengths. The system should be flexible and subtle enough to provide a suite of subjects that allow students to meet the criteria to access higher education but also support their strengths as individuals.

Career guidance should also be compulsory for all schools to undertake at each level of high school. As early as Grade 8, awareness should start to be built of multiple exit points and awareness of the National Student Financial Aid Scheme.

### ***Language***

While there is not official statistics to support languages spoken specifically by young people the General Household Survey reveals the following: Nationally, just over one quarter (25,3%) of individuals spoke isiZulu at home, while 14,8% of individuals spoke isiXhosa, and 12,2% spoke Afrikaans. English was spoken by 8,1% of individuals at home, making it the sixth most common home language in South Africa.

English is, however, the second most commonly spoken language outside the household (16,6%) after isiZulu (25,1%), and preceding. IsiXhosa (12,8%). It is notable that the use of most languages outside the household declined, with the notable exceptions of isiZulu and Setswana.

The Indian/Asian population group was the most monolingual with 92,1% who spoke English at home. More than threequarters (77,4%) of coloured individuals spoke Afrikaans at home while 20,1% used English. More than three-fifths (61,2%) of white South Africans spoke Afrikaans and 36,3% spoke English. By comparison, black Africans spoke a much larger variety of languages. Besides the two most commonly spoken languages, isiZulu (31,1%) and isiXhosa (18,2%), notable sub-groups of black African individuals also spoke Sepedi (12,4%), Setswana (11,1%) and Sesotho (9,7%).

We attempt to provide home language tuition in Grades 1-3 but the reality is that a large percentage of learners are not actually taught in their home language.

The following young people do tend to benefit:

- English
- Afrikaans
- IsiXhoza
- IsiZulu

There are often many home languages spoken in one class. Our teachers are mostly not trained or able to teach in different languages. The real issue is that we then change the language of tuition to English in Grade 4 and expect learners to simply adjust which then produces the perverse statistic that our learners cannot read for meaning.

It is our view that the Department of Basic Education needs to undertake greater analysis of what options are available in respect of languages. We do submit that for social cohesion in the country, all minority race groups must study and learn an African language from Grade 1 onwards being either isiZulu or IsiXhosa.

### ***Curriculum reform***

Curriculum reform continues to be a controversial issue particularly in the higher education sector. Basic Education has made considerable gains given the introduction of life orientation, the splitting of Mathematics and Math's Literacy and the compulsory introduction of history. Subjects to align to the fourth industrial revolution such as coding and robotics are also welcomed. It is also important to indicate that both our basic education and higher education curriculum is influenced by the Commonwealth system. While the technical content is not inherently flawed, more needs to be done to reflect on the history of colonialism, apartheid and the celebration of African culture in our curriculum even if it is non-examinable content. Furthermore, learners should be spent time understanding the South African constitution and the Bill of Rights.

### ***Higher Education***

The General Household Survey estimates that 736 820 students were enrolled at higher education institutions (universities and universities of technology) in 2018. Since higher education institutions are fewer than schools and tend to be clustered in specific provinces and geographic areas, a household survey such as the GHS, which is based on a cluster sample may miss some of the students. Even though percentages derived from the survey is useful for planning purposes, absolute numbers should be used with caution. Three quarters (75,0%) of these students were black African, while 14,6% were white, 5,0% were Indian/Asian, and 5,3% were coloured.

Even though most students were black African, the education participation rate of this population group remained proportionally low in comparison with the Indian/Asian and white population groups. The percentage of persons aged 18 to 29 who were enrolled at a higher education institution in the country have virtually remained unchanged at 4,4% between 2002 and 2018. An estimated 12,4% of white individuals in this age group and 11,6% of Indian/Asian individuals were enrolled at a higher education institution compared to 2,9% of the coloured and 3,8% of the black African population groups. The study found that 85,7% of students in the 18 to 29-year age cohort were enrolled at public higher education institutions.

### ***Access to higher education***

Most students finishing basic education would prefer to attend university. This is evidenced by NSFAS 2019 statement which indicated “The National Student Financial Aid Scheme is pleased to report that compared to the previous year at the same period we have received 50 000 more applications. However closer analysis shows that out of the 216 758 applications received since the opening of the 2020 application cycle on September 01, 2019, only 10% of the applicants chose TVET colleges as their preferred institution of study. This shows that as a country we have not yet positioned TVET education and the associated criticality of skills developments as an imperative choice for our national development ideals.”

TVET colleges play an important role in our education system especially if one considers the transition from early basic education exit to TVET colleges. However, TVET's do pose several challenges which include:

- They lack the same allure and brand positioning as Universities.
- In some cases, they are underfunded or mismanaged leading to poorly executed training programs.
- Unemployment amongst TVET graduates is higher than that of University graduates.
- Many TVET graduates are unable to find placements to perform their experimental learning to obtain certification.
- The quality of TVET college training in some colleges may not be to the required standard for industry.
- TVET graduates are not provided with the same employment status as University graduates.

TVET colleges do require the following to prosper:

- Closer links need to exist between TVET colleges, the Department of Higher Education and Training, Sector Education and Training Authorities and Industry.
- TVET Colleges which are underfunded, mismanaged, or offering courses which lack quality need to be identified and provided with institutional support to ensure that students are provided with proper training.
- A largescale rebranding of the TVET college brand needs to happen to ensure that it is attractive to both prospective students and industry.
- The Presidential Youth Employment Intervention has an important role to play in supporting TVET college graduates who cannot find placements to perform experimental learning.

It should be considered that the state takes responsibility for the trade test training centres. The exit point for TVET students must clearly be a trade test obtained from the TVET College, which enables them to immediately enter the labour market. It is our view it has been an injustice for the state to leave to the private sector and the labour market with the role of completing the qualification of TVET students, hence the high unemployment rate. The current TVET system only furnishes students with an incomplete qualification that cannot be utilised to obtain employment. Whereas private companies are profit driven and are not assisting in granting the TVETS graduates' apprenticeships so that they can complete their training and obtain trade tests or Nated Diplomas. The proposal is that TVET colleges must develop capacity to offer trade test training and be accredited to offer such qualification

While there are many steps that need to be taken to resolve institutional challenges associated with TVET colleges, there needs to be a collective view that currently there is insufficient public University space to meet the demand of young people interested in pursuing higher education through public university. Government needs to forecast University applications over the next ten years and create either new University capacity or extend current University capacity. Each student who meets the criteria to enter University should be declined for lack of space. In this regard, the State of the Nation 2020 announcement for a new University of Science and Technology in Ekurhuleni is welcomed.

### ***Student funding***

The "Fees Must Fall" protests in 2015 brought the plight of student funding to the forefront but student funding had long been in a challenge. The introduction of a phased in approach to fee free higher education was welcomed and was a pivotal moment in South Africa's democratic history. There does however remain three fundamental issues which cause sporadic protests annually at Universities:

- Students who carry historical debt from previous academic years and are unable to register. These students either do not meet the criteria for the new dispensation of fee free education or the dispensation came to the fore after they had registered.

- Students who form part of the “missing middle” whose household income exceeds R350 000 but due to relative socio-economic conditions cannot afford the costs of public higher education.
- Challenges which exist for payment of tuition, student allowances and accommodation between Universities, NSFAS and young people.

In this regard, the Department of Higher Education needs to develop a comprehensive plan in respect of historic debt – many students have made progress and to simply cut them loose while they have the talent and ability to succeed does not make sense for the students and the country.

Similarly, while the fiscus may not allow for all students to be covered there needs to be mechanisms whereby the missing middle can access funding to study at tertiary level.

NSFAS has made considerable progress in addressing its challenges – however it needs to strengthen its relationships with students and universities to iron out primarily payment and reconciliation problems.

Majority of matriculants from rural areas school find difficulty with applying for NSFAS, firstly due to lack of information and secondly due to lack of resources needed to apply (e.g. online application and the scanning of documents). The argument and proposal is that the state can use the Umalusi matric examination application process to also run the NSFAS application process. That would ensure, that the application of NSFAS becomes a compulsory activity in all the no-fee school, and it is done as early as March every year. This gives NSFAS, in partnership with institution of higher learning enough time to properly plan and place the matriculates who are from the most vulnerable backgrounds. This also allows youth development institutions to know as early as June of career choices challenges and run campaigns to rectify them. The proposal is that the state must be deliberate in ensuring the prioritisation of the poor and the working-class youth in accessing NSFAS funding

## ***Student accommodation***

Student accommodation at tertiary institutions remains a challenge facing young people. It is not uncommon to find students sleeping on the floors of libraries and other parts of campus – without safe, secure accommodation, it cannot be expected for students to perform at optimum levels. In this regard, the State of the Nation 2020 announcement for increased funding for student accommodation is welcomed. In addition, there is public infrastructure close to tertiary institutions which is under or not utilised which could be repurposed for student accommodation.

Research has linked better education and better skills to better economic prospects, better health, and to better prospect of participation in civic matters. The Quarterly Labour Force Surveys and other studies show a clear correlation between the likelihood of being employed and the level of education, whilst the GEM report 2017/18 shows a correlation between entrepreneurship participation and the level of education. The National Development Plan (NDP) also underscores the significance of education in development and in realising the developmental goals set in the plan.

Recognising the value of education, the democratic government has directed substantial resources to education. Since 1994, the budget allocation for both basic and post-school education has been hovering around 20% of the overall budget, which is an equivalent of just over 6% of Gross Domestic Product (GDP). However, data show that despite this substantial investment more still need to be done to get better outcomes. International studies have shown that even countries with less resources perform better than South Africa in international tests such as the Trends in International Mathematics and Science Study (TIMSS) and Southern and Eastern African Consortium for Monitoring Educational Quality (SACMEQ), though the country has shown improvement over the years.

Whilst access to education has improved at all levels of education, the system is still characterised by socio-economic inequalities – for instance, learners in the lower quintile schools are more likely to fail or to perform below par. This is corroborated by various

studies. For instance, the 2017 SACMEQ IV tests, which showed that the mean score of the learners in top 25% of socio-economic status is 580,1 in Mathematics compared to the bottom 25% learners with a mean score of 526,8. In reading, the top 25% got a mean score of 569,3 compared to a mean score of 511,7 for the bottom 25%. To be noted is that the mean scores for the bottom 25% are considerably below national averages of 538.3 for reading and 551.5 for Mathematics. More substantial was the disparities between rural and urban learners – with reading mean score for rural learners at 490.9 compared to 585.8 for urban learners and with Mathematics mean score for rural learners of 512.4 compared to 590.7 for urban learners.

Whilst there is a link between better performance and attendance of early childhood education (ECD), a lot still need to be done to provide quality ECD for all the learners in South Africa. About 11% of 5-year-olds and close to 4% of 6-year-olds do not attend ECD (See Appendix D). SACMEQ scores have shown a strong correlation between ECD attendance and higher scores for the Grade 6 learners who participated in the 2017 study. The Department of Basic Education acknowledges the importance of ECD in preparing learners for higher grades. However, like at all levels of education, the provision of ECD is characterised by inequalities.

Learners with disabilities are more likely to find access to education difficult compare to learners without disabilities. It is estimated that 5,4% of children with special needs aged 7–15 years are not enrolled in any educational institution. This is often because of limited provision and/or discrimination. Provision speaks to properly equipped schools to support learners with special needs, while discrimination speaks to skewed allocation of resources

and stigmatisation. Furthermore, learners with intellectual challenges are not given sufficient attention in the public schooling system.

Grade repetition and drop-out rates are a major challenge for the education system with learners with disabilities affected the most. In a study conducted by Stellenbosch University and the Bureau for Economic Research, it was estimated that 8% or about R20 Million of the Department of Education's budget is absorbed by grade repetition. The highest repetition rates are in Grade 10 and 11 at just over 20% compared to other grades at just below 10%. Evidence also suggest that repetition is linked to drop-out because learners who repeat grades are more likely to drop-out. It is estimated that only between 45% and 55% of learners who start school eventually end up in Matric. This means that although the Matric pass rate has been improving, it is only a reflection of performance by about half of the learners.

Socio-economic circumstances like poverty have been identified as some of the key drivers of repetitions and drop-outs. Despite the proliferation of no-fee schools (about 70,3% of schools are no-fee schools), about 21,6% of learners stated "no money for fees" as a reason for dropping out of school. Just over 63% learners in South African schools receive social grants, which reflects the extent of poverty in the country. The provincial spread of learners in schools receiving social grants show that except for Gauteng (46%) and the Western Cape (54,5%) over 60% of learners in other provinces receive social grants. Amongst female learners, pregnancy is estimated to contribute about 33% to the dropouts.

The learner: teacher ratio in South African primary schools is estimated at 1:30. This is on the high side and in some schools is much higher, which could make teaching and learning difficult. Evidence shows that outcomes in numeracy and reading in South Africa are very low compared to countries of similar income. Infrastructure in some township and rural schools still does not meet the minimum Norms and Standards set by the Department of Basic Education. It is important to deal with basic infrastructure as it has a major bearing on educational outcomes.

In terms of higher education, an Organisation for Economic Co-operation and Development (OECD) study ranked South Africa the lowest with only 7% of the population having obtained higher education qualification. The figure falls even lower at 6% for the 24 to 34 years population compared to the OECD average of almost 45%. Racial inequalities in accessing higher education and in outcomes are also manifested with only 4,6% of the Coloured and 4,3% of the black African population enrolled in higher education compared with 20,0% of White and 17,4% of Indian/Asian. Funding for high education is still a challenge despite the introduction of "free education" in 2016. The budget allocation for the National Student Financial Aid Scheme (NSFAS) is not sufficient and there is a persistent challenge of the "missing middle". While the "missing middle" have a family income above the threshold for funding by NSFAS, but they are not able to afford high education because of a multiplicity of reasons. Amongst the reasons being

that NSFAS use total income as a key factor for assessing who qualifies. Exclusion of other factors result in many students excluded from NSFAS funding.

Despite improvements made to Technical and Vocational Education and Training (TVET) colleges and despite shortage of technical skills in the country, many students still see the colleges as a second option. The NDP emphasised improvement of both the participation rate to 25% and the graduation rates to 75% in TVET colleges. Furthermore, state owned enterprises are urged to provide skills development platform for TVET graduates. However, studies also show that learners from the TVET colleges are less likely to be employed compared to those with a bachelor's degree. Currently, TVET graduate have about 22% chances of being unemployed compared to university graduates at only 8,4%. Alternatively, TVET graduates should be supported towards self-employment.

The Covid-19 pandemic is threatening schooling and the entire education system. In 2020 learners and university students have lost many days of learning. Whilst affluent schools have responded by providing online tuition, poor schools could not provide online tuition potentially increasing skewed outcomes. Although not scientifically validated, indications are that the pandemic has increased drop-outs rates. It is estimated that close to 2000 teachers have lost their lives to Covid-19. The impact of the pandemic on the youth will be felt many years to come.

More work needs to be done to take advantage of new technologies brought about by the 4IR to enhance teaching and learning at all levels of education. Secondly, the education system must prepare young people for the new economic environment that is emerging with the 4IR.

### **2.8.1 Key Points for strategic consideration:**

- The outcomes of our education system do not match the number of resources invested in the education system
- Socio-economic status is still a big factor in school outcomes with poor schools likely to perform badly than the affluent ones
- ECD is an important component of improving educational quality and outcomes, but not all learners have access and those who have access it is characterised by inequalities.
- Grade repetition and drop-outs are big problem for the schooling system (Grade 10 and Grade 11 being the main problem areas) - repetition and drop-out are highest amongst youth with disability
- There is a considerable number of youth with special needs not attending any educational institution
- School infrastructure in certain areas is still below the desired level
- TVET colleges are still seen as second option despite shortage of technical skills
- Compared to similar countries participation rates in higher education are low in South Africa

- Funding for higher education is still a challenge because insufficient funding and exclusion of many factors that make student not be able to afford higher education when assess who qualifies
- Like in other areas of the South African life race, gender, and geographic location contribute to unequal educational access and outcomes
- Deliberate planning and action must be taken by the education system to constantly prepare young for the changing economic environment emerging with 4IR.
- Covid-19 pandemic caused disruption in schooling and post-school education.

### Special Schools

There are 466 public schools with special needs. The list has been compiled by the Department of Basic Education (DBE). Working together with the Department of Women, Youth and Persons with Disabilities (DWYPD) the National Youth Development Agency (NYDA) will facilitate the process of attending to schools with special needs. Above all, this is the DBE competence and thus NYDA will advocate that public schools with special needs receive special attention from the respective stakeholders, such as DBE, DWYPD, None-Government Organisation (NGOs), business and labour. Accordingly, the role of NYDA in this regard is to ensure that issues pertain to youth empowerment and development receive special attention from all three spheres of government. NYDA will monitor this process to ensure that such becomes one of the priorities by the DBE, and it will be monitored after the five-year term.

The DPME has 'outcomes facilitators', who are given responsibilities in ensuring that all outcomes captured in the Medium-Term-Strategic-Framework (MTSF) document are implemented, without any unforeseen hindrances/circumstances. Apart from the underpinning statement, MTSF (2019:114-115) under health pillar/priority on implementation plan states the followings... "improve educational and health outcomes and skills development for all women, girls, youth and persons with disabilities". The measured outcome is worded as follows... "mainstream gender, youth and disability rights in programmes on access to universal education, life skills, skills development and training and in different fields of study, including STEM subjects". In accordance with MTSF government document, the DBE and DHET are the leading departments, however, it should be emphasised that the Department of Social Development (DSBD) should be in the forefront to provide cogent special expertise on social ills. It housed social workers and psychologists who would provide expert knowledge on learners with special needs.

## 2.9 Current challenges: Pillar 2 Economic transformation, entrepreneurship, and job creation

The National Treasury observed that "the combination of low growth and rising unemployment means that South Africa's economic trajectory is unsustainable"<sup>6</sup>. This statement does not only paint a bleak picture, but it also draws our attention to the

---

<sup>6</sup> National Treasury (2019)

urgency of the situation. Covid-19 has since made the economic situation even bleaker, by not only putting many of the economic interventions in disarray, but by also literally strangling the economy. Like blood gushing out of a stab wound, the bleeding economy is shedding jobs at an accelerated rate, as more businesses close because of falling revenues. Mindful that the youth are the first casualties in the event of an economic downturn, youth economic empowerment through implementing relevant programmes becomes essential.

One of the priorities of the MTSF (2019-2024) and the South African Economic Reconstruction and Recovery Plan is to foster “gender equality and economic inclusion of women and youth<sup>7</sup>”. It is not hard to fathom why the exclusion of certain portions of the population from the economy was detrimental to the whole society and to the economy, and why if not dealt with, will continue to be detrimental. The youth are one component of our population that has not been fully brought into the societal and economic mainstream. Placing the youth at the centre of development, is therefore necessary and should be supported by reliable and up-to-date information.

Slow economic growth is the first and an overarching hurdle that militates against youth economic participation and inclusion. Estimates suggest that for the South African economy to make any meaningful impact on youth unemployment, it needs to grow by about 5% or more per annum. Despite various macroeconomic interventions intended to increase growth, including Growth Employment and Redistribution (GEAR), New Growth Path (NGP) and the National Development Plan, the economy has not reached the required level of growth to deal convincingly with poverty and unemployment. Indications are that the required growth may not happen soon enough given the current situation which is characterised by global economic downturn mainly driven by Covid-19 pandemic. Statistics South Africa estimates that in 2020 there was about 7% decrease in economic activity as compared to 2019. What is even more concerning is that studies show that historically calamities such as Covid-19 pandemic tend to have negative long-term effect on youth development.

Poverty, which, has been shown to be more prevalent amongst the youth as compared to the adult population, is the second hurdle to economic inclusion of the youth. According to Statistics South Africa, poverty levels are highest among children aged 0-17 years at about 63% followed by the youths aged between 18 and 24 years at 58,6% and at 47,1% for those aged between 25 and 34 years. This is as compared to those aged 35 and above at an average poverty level of about 42%. In 2019, just over 24% of youth-headed households were classified as low-income households<sup>8</sup>. With youth unemployment rising rapidly and youth business ownership low, there is nothing to suggest that the poverty status of the youth has substantially changed in a positive way in the last four years. Furthermore, people living with disabilities are more vulnerable to poverty as they are

---

7 DPME (2019)

8 StatsSA (2020) General Household Survey 2019

often denied economic opportunities because of stigmatization and general discrimination. Despite South Africa ratifying the United Nations Convention on the Rights of People with Disabilities (UN CRPD) in 2007, a lot still need to be done to entrench the rights of people with disabilities.

Like many aspects of life in South Africa, race is also an important factor in poverty prevalence with Blacks more likely to be poor compared to Whites. Geographic location also has been shown to have a bearing on poverty prevalence with about 60% of the poor living in rural areas. The predominantly rural provinces of Eastern Cape (59,1%), KwaZulu Natal (26%), and Limpopo (57%) have a bigger share of the poverty. About 25,2% of South Africans lived below the food poverty line. For those in living in rural areas the figure for those living below food poverty line was at 45,6% compared to those in urban areas at 13,4%. Whilst social grants have played a critical role towards alleviating poverty, it is important that young people are empowered to generate their own income in the long run. The 2019 General Household Survey (GHS) shows that about 18 % of the South African households experienced inadequate or severely inadequate food access. About 24,5% of youth-headed household are classified as low-income households. Limpopo shows the highest number of such households at 51,5 way above the national average of 24,5, whilst Gauteng (12,9%) and the Western Cape (15,5%) had the lowest numbers (**See Appendix G**).

Another problematic area that we need to grapple with is youth unemployment, which has the potential to worsen poverty levels and inequalities. With respect to employment, data from Stats SA show a positive correlation between age and employment. Despite data showing that just over 60% of the youth's main source of income is salaries, unemployment is increasing unabatedly with young people constituting just over 70% of the unemployed. The situation might become gloomier when we start to interrogate the nature of the jobs that those who are employed hold – what proportion of those jobs are decent?

Poor educational outcomes have also been identified as a contributory factor to the unequal labour market participation. Education level and gender have a significant influence on unemployment level with those with a bachelor level of education or equivalent having about 92% chance of being employed compared to about 66% for those with only secondary school education and 78% for those with other tertiary qualifications. A household headed by a person with tertiary education has 30% more chances of escaping poverty compared to those headed by individuals with less education. Females are more likely to be unemployed and/or to earn lower wages compared to males.

The legacy of apartheid is still manifested in the labour market with Whites and Indians least affected by unemployment and earning relatively high wages compared to Africans and Coloureds. In addition, Whites and Indians are more likely to have better education and the necessary social capital which puts them at an advantage to access employment opportunities. A 2017/2018 South African Human Rights Commission (SAHRC) report on economic equality found that the private sector is not doing enough to transform the

labour markets. Youth with disabilities face unequal access to the labour market compared with youth without disabilities who are more likely to be employed. At a micro-level, socio-economic circumstances could also limit the ability of some young people to look for employment. Investing in support for jobseekers could improve the situation.

Basic Income Grant (BIG) is one of the instruments that could be used to support jobseekers amongst other beneficiaries.

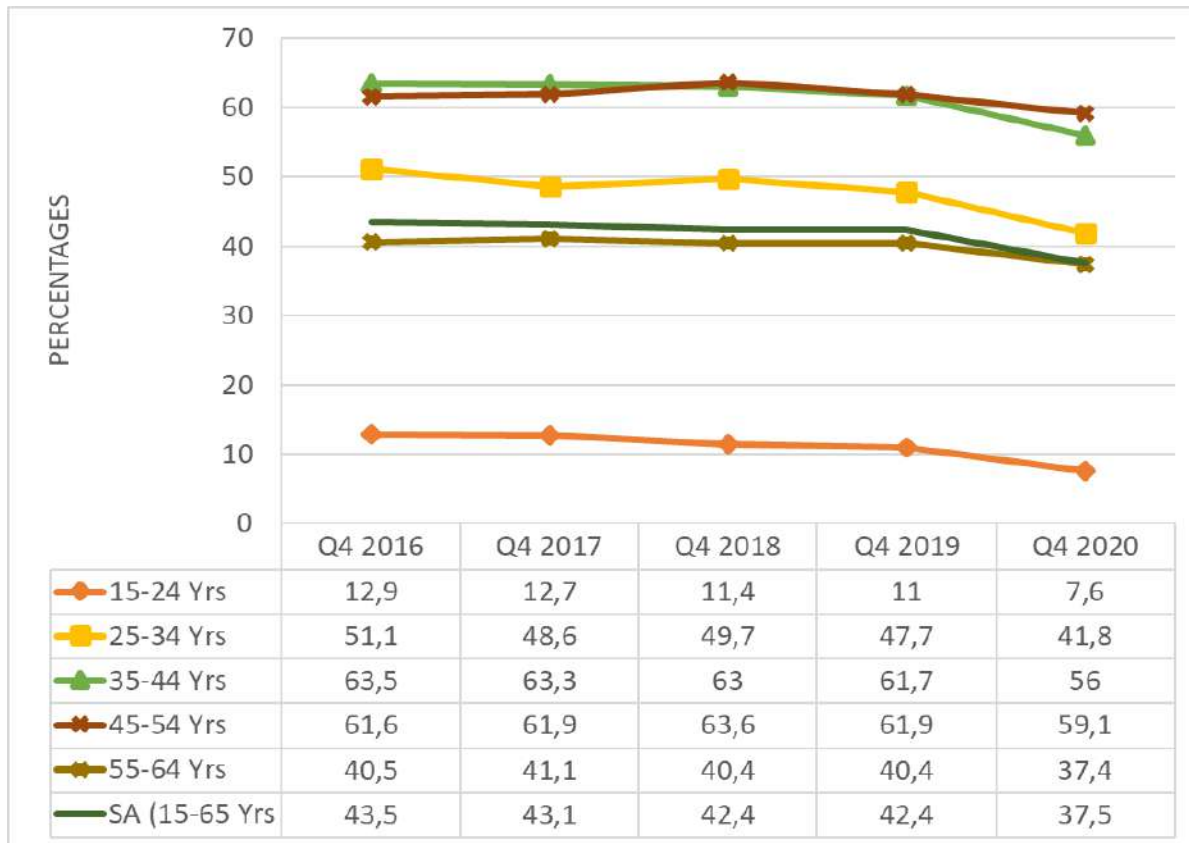

**Figure 4** below shows narrow unemployment trends by age since 2016, which has been consistently high among the youth. Unemployment is even higher when expanded definition of unemployment is used to measure it. Of particular concern, is that there has not been any improvement in youth unemployment figures, instead the figures suggest that it has worsened in the last five years. Figure 4 also shows a significant rise in unemployment between the fourth quarter of 2019 and the fourth quarter of 2020, which could be a manifestation of the impact of the current global economic downturn and/or economic shock wave resulting from Covid-19 pandemic.

Labour absorption rates by age are captured in figure 5, which shows that the absorption rate is at its lowest for youth between ages of 15 and 24 years and at its highest for those aged between 35 years and 54 years. This is in line with international trends which show that globally young people aged 15-24 years are three times more likely to be unemployed compare to those over 25 years of age. Those aged 35-54 years are 12% more likely to be employed than those age 25-34 years. Those aged between 15 and 24 years are more than 50% unlikely to be employed compared to those aged 35-54 years.

**Figure 4: Unemployment trend by age (2016-2020)**

Source: Stats SA QRLF Surveys Trends

**Figure 5: Labour absorption rate by age (2016-2020)**

*Source: Stats SA QRLF Surveys Trends*

Whilst higher education makes it easier to find employment, the increasing unemployment rates are beginning to impact on graduates. The 2020 fourth quarter Labour Force Survey show a graduate unemployment rate of 8,4%, which is still considerably lower compared to national unemployment of 32,5% - and for those with only Matric (33,9%), for those with less than Matric (37,8%) and for those with other tertiary qualifications (21,8%). Graduates constitute only 1,8% of the overall unemployment compared to 52,3% contributed by those with less than Matric and about 38% by those with Matric. Of concern is the rising trend of unemployment amongst graduate cohort (from 5% in quarter 4 of 2015 to the current 8,4%), but overall, a university degree is still one of the best ways to escape unemployment. During lockdown caused by Covid-19, only 10,2% of graduate got a salary cut compared to 20,7% of those with only high school education. Another positive for graduates is that the NDP advocates for the establishment of graduate recruitment schemes in the public sector, which create opportunities for graduates and at same time develop high quality skills for the public sector (**See Appendix H for unemployment by level of education**).

It is estimated that about 60% of the unemployed youth below 35 years have never worked, which suggests that they have not only missed out on income, but they have missed out on the opportunity to gain skills and experience. This makes it even harder for them to get employed in future. It also means that the economy has missed out from their productive capacity.

The 2022 first quarter Labour Force Survey found that about 8,6 million of those aged between 15 and 34 years are not in education and not in employment (NEET) – which translates into about 3,2 Million or about 34% for those aged between 15 and 24 years, and about 5,6 Million for those aged between 25 and 34 years. Studies link NEETs to mental health challenges, anti-social and risky behaviour which in most cases lead to dependency on the state<sup>9</sup>. Although there are multifaceted interventions to deal with education, skills development and youth economic participation, there is no focussed intervention to deal specifically with NEETs.

Many countries agree that nurturing youth entrepreneurship has a great potential to contribute to economic growth, poverty alleviation and employment opportunities. Various studies have corroborated this view. However, available evidence shows low levels of participation in entrepreneurship amongst the South African youth compared to those aged 35 years and above. The country also shows low entrepreneurship participation when compared to other countries. Many businesses owners are aged 35-39 years and 40-44 years compared to any other age group. Evidence shows that there was no significant change in the age patterns of business ownership.

Rated at -0.02 on GEM Entrepreneurship Spirit Index (GESI), South Africa is amongst the lowest. The index measures entrepreneurship spirit through the entrepreneurial awareness, opportunity perception, and entrepreneurial self-efficacy indicators. Given the contribution of the SMMEs to the GDP (estimated between 30% and 36%) and to employment, more needs to be done to entrench the culture of entrepreneurship. Our government's program to entrench entrepreneurship is rated very low at number 50 out of the 54 countries studied by GEM in the 2017/2018 report. The country rated below all the African countries included in the study – i.e. Morocco, Madagascar and Egypt. Figure 6 below shows Total Early-stage Entrepreneurial Activity (TEA) in South Africa by age comparing it to the African averages in 2017. South African entrepreneurship participation rate compares unfavourable with the rest of the continent, which suggests that there is still considerable room to improve. The figure also indicates a decline in TEA for all groups in 2016 followed by considerable increase in 2017. Only TEA for those aged 45-54 years increased between 2015 and 2016 and then declined between 2016 and 2017.

---

<sup>9</sup> De Lannoy and Mudiriza (2019)

**Figure 6: TEA by age group in South Africa, 2015 –2017**

*Source: GEM South African Report 2017/2018*

Limited participation in entrepreneurship is further exacerbated by high failure rate of start-up businesses in South Africa. Just above 31% of entrepreneurs in South Africa cited fear of failure as a major concern. According to the 2017/2018 GEM Report, entrepreneurship finance is still a problem in South Africa – with the country rated number 31 for access to funding out of the 54 countries in the 2017/2018 GEM study. As a result of requirements such as collateral attached to funding application, many young people do not qualify for funding. Small Enterprise Finance Agency (SEFA) and other development funding institutions could make a positive change by exploring different funding models for the youth, who often do not meet the traditional funding requirements. In addition, many of the youth businesses are in the informal sector meaning that they cannot access funding and business opportunities because certain documentation is required to qualify. The consultations with the youth sector pointed out that whilst there are legal mechanisms to compel state organs to provide business opportunities for the youth, it is limited and weak when it comes to the private sector. However, procurement can be used to compel private businesses through set-asides. For instance, when the state procures goods and services from private businesses it could insist on business opportunities being set aside for the youth sector. In other words, it should be a condition that if the state procures from a business that business must set aside at least 30% of its business opportunities for the youth. However, the constitutional and legal implications of these would need to be investigated.

Whilst initiatives to deal with economic inequalities like the Promotion of Equality and Prevention of Unfair Discrimination Act, no.4 of 2000, Broad Based Black Economic Empowerment Act 53 of 2003, Employment Equity Act No. 55 of 1998, and the Preferential Procurement Policy Framework Act 5 of 2000, have been put in place, their impact still leaves much to be desired. Moreover, they are less specific about youth development. Learnerships and internships have not had the desired impact in terms of reducing unemployment and increasing participation in entrepreneurship. The impact of Sector Education and Training Authorities (SETAs) on skills development still has room for improvement. More stringent monitoring of the implementation of these instruments is necessary to see better results.

An overarching area that needs intervention in youth economic empowerment is financial education. Without undermining other factors that makes accumulation of wealth by the youth difficult, it is important to recognise that financial literacy plays a big role in wealth accumulation. Financial education/literacy is defined by the Organisation for Economic Co-operation and Development (OECD) as “The process by which financial consumers/ investors improve their understanding of financial products, concepts and risks and, through information, instruction and/ or objective advice, develop the skills and confidence to become more aware of financial risks and opportunities, to make informed choices, to know where to go for help, and to take other effective actions to improve their financial well-being”<sup>10</sup>. Studies show that financial literacy in South Africa is amongst the

---

<sup>10</sup> Cited in HSRC (2018)

lowest in the world with overall financial literacy at 54%<sup>11</sup>. The high levels of indebtedness in South Africa are attributed to low levels of financial literacy. The World Bank has categorised South Africa as one of the countries with a high level of indebtedness – largely for consumption rather than for building assets.

New economic opportunities are created because of the changing economic environment driven by 4IR. It is important that young people are encouraged and supported to take up these opportunities. Although young people have individually begun to take up the opportunities, there is a need for a national approach that could be factored into the recommendations of the Presidential Commission on 4IR.

Covid-19 is not only causing loss of lives, but it has also caused loss of livelihood, as businesses are forced to close, resulting in a sharp rise in unemployment. For instance, a 2020 global survey by International Labour Organisation (ILO) reports that about 17% of youth who were employed before the outbreak of Covid-19 lost their employment after the outbreak. The survey points out that impact was mainly felt by youth between 18 and 24 years. Furthermore, the likelihood is that this figure has since increased as the global economy deteriorates as more countries went into lockdown. Whilst the impact on youth business is still to be quantified, the likelihood is that they are the hardest hit given that most of them are start-ups. As such many of them do not have reserves to sustain their businesses during hard times.

The government has implemented several public employment programs which primarily targeted youth, namely: Community Works Program (CWP); Expanded Public Works Program (EPWP); National Rural Youth Service Corps (NARYSEC); youth cooperatives and youth entrepreneurs (e.g. NYDA funded); skills training (e.g. learnerships funded by SETAs); Jobs Fund; Employment Tax Incentive (ETI); Youth Employment Service (YES); and Youth Employment Accord.

11 HSRC (2018)

In South Africa, there are unique, systemic-level barriers to entry into economic opportunities and existing value chains for entrepreneurs, especially in townships and rural areas, with these compounded by constraints which negatively affect youth. Where economic participation is possible, this is often on deeply disadvantageous terms.

For a start, the structure of the South African economy makes us a special case amongst developing countries, with implications for the scale and scope of employment creation from small enterprise. Under apartheid, the combination of foreign exchange controls and sanctions meant that mining profits could not be exported in the ways they might otherwise have been. Instead, these were re-invested inter alia into the mass production of consumer goods, including bread, maize meal, tea, sugar, beer, tinned goods, peanut butter and much more. One of the consequences of this is that most of the goods found in the standard consumption baskets of poor people are mass-produced in South Africa's core economy, and are often relatively efficiently distributed to even the most remote spaza shops.

This competitive context limits what is, in other developing countries, the classic entry point into small-scale manufacturing. The typical starting point for local economic development is for entry-level entrepreneurs to produce the basic goods most commonly needed locally, growing in scale and market outreach from there. In South Africa, however, local markets for basic consumer goods are typically already taken and it is hard for small-scale start-ups to compete in relation to the established, mass-produced brands. This is at least part of the explanation for the limited incidence of small-scale manufacturing in townships, with retail activities that distribute such mass-produced goods a more common entry-point into markets instead.

Then there are the implications of spatial inequality, which concentrates poverty within the structures of our cities, towns and villages, creating economic inefficiencies and illogics that reproduce existing patterns of economic disadvantage – and of both exclusion or inclusion on adverse terms. The distance of many townships away from economic centres can add costs to production activities located there, since current market access points are located in other places. The spatial concentration of poverty and unemployment means local markets are relatively thin for many products. In rural areas, the continued legacies of land expropriation and of the Bantustan system are still evident in patterns of land use and distribution. So, during the apartheid years, land pressures in Bantustans meant increasing sub-division of land into smaller and smaller units. Meanwhile, the reverse was happening in the white farming sector, with consolidation of farm-sizes enabling economies of scale and the rise of the vertically-integrated agro-processing giants we have in our economy today. This duality of trajectory within the sector means that for small producers, it is, for example, often cheaper and less risky to buy store-bought maize than to grow it for own consumption and even where small producers are included in value chains, the prices they receive from large-scale agro-processors are often not enough to cover their costs of production. This is, for example,

the case in relation to the current price of milk received by small producers in the dairy value chain.

The point is that opportunity identification needs to factor in the economic impacts of apartheid's many legacies, with success unlikely from simply replicating patterns of the past - or simply including new entrants in value chains in which concentration stacks the dice against them. Yet finding and creating new pathways to opportunity involves risk-taking, new forms of organisation and intermediation and new patterns of benefit-sharing. Much of this requires an active role for the state in shaping markets and shifting incentives within them.

In urban areas, the spatial concentration of poverty and inequality has led to a renewed focus on township economies. Here too, if the aim is systemic change, then township economies need to be understood as a system – with people at the centre, in diverse capacities including as workers, consumers, residents, tenants, migrants – and entrepreneurs. A systems approach to a township economy recognises that townships are embedded within wider spatial dynamics, within the wider structure of the economy, and of course within the wider society too. Within this framework, township economies are also impacted by a range of other factors – with dynamics in townships impacting on the wider context too.

The quality of public goods and services is a critical issue. For example, erratic electricity, water and telecoms negatively affect productivity. Pot-holes in the roads can mean delivery trucks won't deliver to local enterprises and failures of waste removal are not just a health hazard for residents, they affect the scope for certification of food-related businesses.

Lack of street lights and poor community policing enable crime, which takes a huge toll on existing businesses - and often deters people from even starting businesses. The fear factor prevents suppliers and customers from coming in from outside the township. All of these factors impact on the competitiveness of township enterprises.

In the informal sector, access to basic services is particularly limited. SESE (2017) shows that more than one out of five persons (23,1%) running informal businesses had no electricity at their businesses while 15,6% had no toilet facilities available at their businesses. In addition, 17,4% used water from a public tap while only 28,9% had piped water on site. As many as 84,9% of informal entrepreneurs had access to cellular telephones, however.

Regulatory issues are also critical. Official spatial planning and land use management functions too often undermine economic opportunities in townships, entrenching inequality and poverty in these areas. Strict zoning separating residential and business uses is often not appropriate in a township environment and can directly undermine or eliminate livelihood opportunities. Lack of titling and other secure forms of tenure in many townships, informal settlements and rural areas limits the scope for investment in business premises and therefore for asset accumulation. This also inhibits the functioning of property markets. Licensing procedures are not always fair, efficient, or appropriate. Insofar as it takes longer to get approvals such as for construction and utility connections for business premises in a township, this reproduces the spatial distribution of economic development – because businesses will simply locate where efficiencies are higher.

The systemic-level constraints in marginal economic contexts are reflected in outcomes. The inconvenient truth is that despite the policy hopes pinned on small businesses as a solution to unemployment, small enterprises in the formal sector are not currently creating employment at scale, with South Africa an outlier in this regard. So while formal SMEs contribute nearly 98.5% of the number of formal firms in the economy, they only account for 28% of the jobs. Based on international trends, this should be about 60 to 70%.

This does however leave out the role of the informal sector. The SESE 2017 survey shows that there are 1.8 million people running non-VAT registered businesses in South Africa, largely owner-operated, without additional employees. 67% of individuals who run such non-registered businesses do so because they are unemployed and/or have been recently retrenched – with 28% of these businesses run by young people (age 15-34).

While the failure rate is high, and survivalist activity may seem marginal to aspirations for decent work, the scale of numbers engaged in the informal sector means that improvements to conditions of work and to returns to effort at this level can have significant impacts on poverty – and to creating pathways out of it.

### **Youth self-employment**

Youth unemployment is at crisis levels and intensified intervention is urgent. Yet, unfortunately, even with a significant shift in our growth trajectory, labour demand will remain significantly below required levels for some time to come.

In a context of such limited demand, the spotlight has fallen on the potential for youth entrepreneurship to close the gap. While certainly, entrepreneurship is a choice for some, many youths would prefer simply to get a job, and while there certainly are opportunities for youth self-employment and enterprise development, the systemic challenges outlined above are compounded by constraints that affect youth in particular.

Youth typically lack work experience, which is often a vital ingredient in running a successful business. They lack access to capital, to finance, and even, often, to basic financial services. In poor communities, role models and mentors may be scarce. The support eco-system is typically thin. Financial and business literacy is often low. Spatial inequality limits people's horizons and their exposure to wider markets. In addition, the psycho-social impacts of long-term unemployment compound the challenges in a negatively reinforcing spiral. These include a sense of hopelessness, social isolation and exclusion, a lack of structure in their days, depression, anxiety, and a sense that they are not valued by their household, their community, or their society. In too many households,

unemployment is inter-generational, significantly limiting access to relevant networks and to information crucial to signalling opportunity.

Social participation can mitigate some of the worst of these impacts of long-term unemployment, providing youth with networks, structure, and a sense of purpose and community recognition that enhances self-worth. Participants learn team-work, organising skills and mutual accountability, enhancing work readiness and the capabilities required for self-employment. Crucial roles are played in this regard by civil society organisations, by Youth Service and by community-service oriented public employment programmes. The strength of local social institutions – including diverse forms of organisation and social, cultural and sporting activities and networks – all contribute to social cohesion and the social activation of youth. This is important but is also often the first rung on the ladder of economic activation of youth. In addition, such organisation and activity also creates economic opportunities, in the social economy and beyond. In strengthening this ‘critical path’, there is a need and for greater recognition of the link between social and economic activation, and an opportunity to more deliberately strengthen the interfaces between them.

For this reason, several of the strategies for youth self-employment and entrepreneurship focus on approaches that include an element of social mobilisation of youth, in ways intended, in the process, to enable economic activation and to create new forms of market demand.

The idea is to take a ‘whole of society’ approach to certain social priorities, with scope for multiple stakeholders to play diverse roles. While the social outcomes are important, the aim is to experiment with an approach that uses such mobilisation, along with social investment, to shape and strengthen forms of market demand that expand opportunities for young entrepreneurs.

In our view, the following must be executed to improve on the youth entrepreneurship ecosystem in South Africa:

1. **Connectivity:** Connectivity has been prioritised as the single most important cross-cutting social and economic enabler for youth, because free or affordable access to data and the internet is a social and economic game-changer. For youth, data provides the bridge to wider support networks and to the wider world, in a context in which spatial inequality and poverty limit mobility and their ability to seek opportunities, advice and support. Access to the internet is vital to job search, to accessing knowledge and skills, to networking, to finding solutions to everyday problems – and to running a business of any kind in today’s world, with marketing increasingly reliant on a social media presence.
2. **Transforming public facilities and spaces:** Many different public bodies have invested in public facilities across the country: in community centres, hubs, incubators, civic centres, halls, advice offices, labour centres, libraries, Thusong Centres, community art centres, industrial parks, community colleges and more. These facilities are all, in different ways, resources for social and economic development. Yet all too often, such public facilities are unsafe, poorly maintained and/or managed, with their potential unmet. They are also often inaccessible to youth. Yet with relatively limited intervention, these facilities can often be transformed in ways that support and resource local initiative, participation and enterprise – in ways that can create youth employment opportunities in the process.
3. **Promoting the circulation of money in local economies:** At present, except for fresh produce, a large proportion of the goods sold in townships and small towns are mass-produced in the core economy. This means that money spent locally quickly exits, depriving local economies of the multipliers required for local economic development. This is a key systemic-level economic development challenge.
4. **The enterprise support eco-system:** Strengthening the enterprise support eco-system is a large and complex task that forms part of the mandates of Department of Small Business Development and the Department of Trade and Industry. In the main government needs to ensure that within the ecosystem there is sufficient access to skills, access to finance and access to market.
5. **Public procurement and demand creation:** Public procurement represents about 22% of GDP and an annual spend of around R500 billion. This is a significant cross-cutting developmental lever – with its role enabled by the Constitution, which expressly allows for ‘categories of preference’ in public procurement. It has been used to advance inter alia black economic empowerment and gender equity; to promote local manufacturing through local content requirements and to promote small enterprise through set-asides, consolidated buying, and supplier

development programmes. Its strategic use can have significant impacts on sectors and value chains. For example, state institutions such as hospitals, prisons and military barracks are major buyers within the food system, with the market power to change the landscape of access in a highly concentrated environment.

6. Tech-enabled market aggregators and platforms: With connectivity, the digital age opens new opportunities for aggregating demand and supply – as well as new ways of linking the two that transcend traditional spatial boundaries and distances. The potential for aggregation can create economies of scale for small enterprises in ways that enhance their competitiveness - a critical factor in our highly concentrated economy. At the same time, the ability of digital platforms and web-based services to transcend spatial distances offers opportunities to mitigate some of the impacts of spatial inequality. There is already innovation in this space. Township-based tourism operators offer their services side by side with the suburbs on global platforms. Township-based plumbers and electricians are accessing wider markets through web-based platforms.
7. Apps are bringing take-away deliveries into townships. Young people are completing on-line contracts for global services companies. There is significant local and international demand for fresh photographic and graphic image content for advertising, publications, and on-line media, with potential down-stream opportunities for young content creators in photography, video, and graphic design, on content aggregation and marketing platforms. The context provides scope for a shake-up of opportunities that leap-frog's traditional constraints. No-one is better placed to understand and grasp these new opportunities than the youth.

### 2.9.1 Key points for strategic consideration:

- Slow economic growth is a major hurdle to youth economic inclusion – as it translates into less economic opportunities for the youth
- Poverty affects children and the youth more than the older population
- Social grants play an important role, but for sustainability young people must be empowered to generate their own income
- Youth unemployment has increased considerably over the last few years, and it is considerably higher amongst the youth than the adult population
- Being unemployed does not only deprive the youth of income, but it also deprives them of experience, which could increase their employability – it also denies the economy of productive capacity of the unemployed youth
- It is hard for job seekers to look for employment as they often cannot afford the attached costs (printing, travel etc.)
- The level of education has a bearing in labour market access and on participation in entrepreneurship. Graduates are more likely to be employed than any other group and they have 30% more chances of escaping poverty as compared to those with only secondary education
- Currently there is limited formal way of making the private sector contribute to youth development – Largely it depends on the private sector's good will (set-asides of 30% from private sector doing business with the government is proposed for the youth)
- NEET has also increased substantially in the last few years and yet there is not clear response to the phenomenon
- Entrepreneurship participation is relatively low amongst the youth as measured by GESI, TEA, and the numbers of youth in business vis-à-vis adult above 35 years
- Youth businesses that are in operation face many challenges that including funding and lack of access to markets
- Access to funding and to markets is still a challenge for youth businesses
- The informal businesses or what others call survivalist business need to be supported as they provided livelihood to many young people
- Factors such as race, gender and geographic location contribute to who accesses economic opportunities and to who does not – and to what extent.
- Financial literacy has a bearing on reducing youth indebtedness, which is one of key factors preventing young people from building wealth and by extension perpetuates poverty
- A national approach to encourage and support young people taking-up new economic opportunities that come with 4IR is required
- Covid-19 is causing closures of businesses and loss of employment

#### Rural Development Consideration

Young people in rural areas are the most marginalised in South Africa in terms of access to business development support services. In order to address this challenge, the National

Youth Development Agency must have had a dedicated programme on Rural Development (RD). The RD Programme is a programme aimed at assisting young people from rural areas to improve their livelihood opportunities and this should be achieved through business development skills, support services and products for these young people to become entrepreneurs that are job creators, through self-employment. This is done in a form of individual business owners, cooperatives, and community development projects.

## 2.10 Current challenges: Pillar 3 Physical and mental health promotion including pandemics.

According to research education is not only a good predictor of economic prospects, but it is also a good predictor of good health. This is an indication that education and health are interwoven in positive way. Dropping out of school have been linked to psychological, social and economic challenges. Congruently, bad health impacts on access to education, participation in the economy, and the quality of life. The health of the nation is therefore important as it impacts on other areas of life and a healthy population is central to tackling poverty. It is estimated that 7% of young people suffer from an acute illness whilst 5,7% suffer from chronic diseases. A healthy youth population implies a better future for the nation.<sup>12</sup>

However, unequal access and unequal health outcomes are part of the South African health and wellbeing landscape with the youth hardest hit. The inequalities in the health system is more pronounced between the public and private provision of health. Most of the population do not have access to medical aid, as such they use the often under resourced and overburdened public health system. Only 17,3% of South Africans are covered by medical aid. In 2017, the Department of Health promulgated a National Health Insurance (NHI) Policy, which tries to entrench universal health coverage. The policy attempts to harness all resources in the health sector to provide quality health care for the benefit of all irrespective of their socio-economic status. Whilst the policy has great and benevolent intentions, its piloting has proven difficult, and its impact remain to be seen.

Another area of concern is the increasing mental health challenges amongst the youth. The socio-economic pressure amongst the youth exacerbates the already dire youth mental health situation. For instance, a study by the International Labour organisation (ILO) found that youth (18-29 years) who lost their jobs during Covid-19 have 23% chances of being affected by anxiety or depression compared to those who are still employed at 14%. According to the South African Depression and Anxiety Group (SADAG) about 40% of suicides are committed by people with depression. Though not yet quantified, the loss of loved ones to Covid-19 is likely to result in increased mental health challenges.

---

<sup>12</sup> StatsaSA (2020)

South Africa has the highest level of HIV infections in the world with about 7,2 Million people infected according to the 2017 figures<sup>13</sup>. The figure is corroborated by the 2020 Mid-year Population Estimates report, which estimates the infections at about 7,7 million. Young women are the most affected by the pandemic. Increase in tuberculosis (TB) cases has been linked to HIV infection and consequently, TB has become a leading cause of death. The national roll-out of the anti-retroviral therapy (ART) since 2005 has seen a decline in the percentage of AIDS related deaths from 39,2% in 2005 to 15,4% in 2020. Another positive development is that the Midyear Population Estimates approximate a decline in HIV prevalence amongst the youth aged 15 -24 years from 6,39% to 5,34% between 2002 and 2020 while all other age groups show an increase.

Non-use of condoms, multiple sexual partners, use of syringes for drugs, and alcohol abuse are some of the risk factors associated with the spread of HIV. According to the Demographic and Health Indicators, young males are more likely to have multiple partners with just over 26% of males aged 20-24 and about 20% of males aged 25-29 years indicating that they had multiple partners. Condom usage was particularly high in the male age group 15 to 19 at 87,9%, followed by males in the age category 25 to 29 years (66%). The highest condom usage among females was in the age group 20 to 24 years at 64%, followed by the age group 25 to 29 years at 63,3%. Low female condom usage could be linked to relationships power dynamics where in many cases males have the power to determine if protection will be used or not.

Despite high level of awareness about contraceptives – at 98,8 % awareness for those aged 15-19 years and 100% awareness for those aged 25-29 years, over the 2017 and 2019 period about 12% of young women under 20 years have terminated pregnancy. This figure excludes illegal terminations which are difficult to document give their clandestine nature. Illegal terminations are the riskiest given that oftentimes they are performed by people who are not medically qualified to do so or who do not follow proper medical

<sup>13</sup> Simbayi et.al. (2019) South African National HIV Prevalence, Incidence, Behaviour and Communication Survey, 2017

procedures. This exposes young to possible grievous bodily harm or even death. It is therefore very important to escalate sexual reproductive rights education.

Obesity, which is linked to many life-threatening health conditions like diabetes, heart conditions, certain cancers, and now with Covid-19 mortality, is increasing exponentially amongst young people. Poor nutrition and sedentary lifestyle are the major contributors to obesity. About 17,3% of young women in the age category 25-34 years are severely obese compared to young men in the same age categories at 2,3%. In general, the likelihood of obesity increases with age, and women are more likely to be obese than men.

About 48% of deaths of young people result from unnatural causes such as car accidents and violence, most of which are linked to risky lifestyles. For instance, in 2019 about 4 255 youth were fatalities from car crashes. Tuberculosis (TB) followed by HIV are two leading natural causes of death amongst young people. Youth in the age categories 25-29 and 30-34 are more likely to die from TB or HIV than youth in the age category 15-19 and 20-24. Furthermore, females are more likely to die from tuberculosis (13,6%) and HIV (12,3) compared to males at 8,5% for TB and at 6,7% for HIV (See appendix F).

Substance abuse is another area of concern for youth development. The phenomenon is further complicated by the difficulty in compiling data on the extent of the problem. According to South African Community Epidemiology Network on Drug Use (SACENDU) 2019 report, about 35% of people in treatment for drug use in the Western Cape were under 25 years, in Gauteng the mean age of people treated for drug abuse was 26 years. The mean age of those treated for drug abuse range from 25 to 30 years depending on which province one is looking at. While this is based on data of people in treatment and

not a representative sample, it still provides useful insight into drug abuse. Available statistics suggest that drug abuse is a major challenge amongst the youth compared to amongst adults. The Department of Social Development develops Master Drug Plans through the Central Drug Authority (CDA) to fight the substance abuse sketch, but to date the results are minimal. Despite young people being the main substance abusers, the NYDA's role in the formulation of the Drug Master plan has been minimal.

Alcohol abuse is on the upward trajectory amongst the youth, and it is becoming a major problem in the country. The Demography and Health Survey shows that youths in the age category 20 to 34 are more likely to drink than any of the other age categories. About 21% of male in the age category 20-24 showed signs of drinking problem by cut-annoyed-guilty- eye-opener (CAGE)<sup>14</sup> test and about 22% of males aged between 25 and 29 years showed signs of drinking problems by the same test. Alcohol abuse is linked to violence, reckless driving, and risky behaviour.

The health care system has been stretched to its limitations and exposed in many ways by the impact of Covid-19 pandemic. Limited infrastructure, limited health care workers, limited medical equipment, unequal access to medical care were some of issues highlighted by the pandemic. In addition to lives lost and economic opportunities lost, mental health challenges are on the rise because of the pandemic. The devastating impact of Covid-19 suggests that the country need to be better prepared for pandemics in future.

### Teenage pregnancy

The General Household Survey indicates that 5,2% of females in the age group 14–19 years were at different stages of pregnancy during the 12 months before the survey. The prevalence of pregnancy increased with age, rising from 0,3% for females aged 14 years, to 9,7% for females aged 19 years. The GHS does not indicate whether the pregnancies were unplanned. Education and access to contraceptives and preventative measures remains critical in preventing both transmission of sexually transmitted infections and

---

<sup>14</sup> A test that uses a questionnaire to assess if one has alcohol problem

unplanned pregnancies. The Department of Basic Education and Health both have critical roles to play in continued education and access to preventative measures contraceptives.

In a country where rape and gender-based violence is so rife, and teenage pregnancy is on the rise, perhaps compulsory contraceptives for youth from ages of 12 to 17 is a discussion we must stimulate. What are the human rights issues associated with this? What are the health consequences of contraceptives (e.g., the issue of side effects)? How do we balance the onus of responsibility so that it is not only girls who carry the burden of preventative measure? The facts are 60% of young girls who drop out of schools, are prompted by being young mother and not having adequate support structure for them to return to school.

There is stigma attached to contraceptives treatments in most local clinics, especially where young girls are concerned. Most young girls are ashamed to go for the family planning process. Perhaps the proposal should be an intensive consultation with parents on deriving a solution that would make an impact. For me this is a very controversial topic, but it is a topic that we must have, because with all the wide reproductive healthcare provided for free by government, the problem of teenage pregnancy persists. And it affects mostly the development of young women as opposed to young men.

### **Persons with disability**

We have already emphasised the important role that sports play in physical and cognitive development of young people. The NDP 2030 recognises that sport plays an important role in promoting wellness and social cohesion. The plan treats sport as a cross-cutting issue, with related proposals in the chapters on education, health, and nation building.

All communities should have access to sports facilities and encourage the formation of amateur leagues. Local authorities can also promote exercise by ensuring that urban roads have proper pavements, developing cycle lanes and installing traffic-calming measures. The plan proposes an initiative to encourage South Africans to walk, run, cycle or play team games on the second Saturday of every month. The extensive network of formal and informal sporting clubs can be mobilised to organise these events.

Expanding opportunities for participation in sports will help to ensure sports teams represent all sectors of society. It will also ensure that South Africa produces results that match its passion for sport.

### **Covid – 19 Vaccination Drive**

At the time of writing this document the worldwide Covid-19 doses given are sitting at 10.9 billion and total number of people vaccinated at 4.42 billion, the percentage of vaccination is at 56.6% worldwide. In South Africa the total number of doses given at the time of writing this document is at 32.2 million, people fully vaccinated 17.4 million and percentage of fully vaccinated is 29.4%.

The booster given in South Africa is 1.4 million sitting at 2.4%. To bring this pandemic to an end, a large share of the world needs to be immune to the virus. The safest way to achieve this is with a vaccine. Vaccines are a technology that humanity has often relied on in the past to bring down the death toll of infectious diseases. Now the challenge is to

make these vaccines available to the people around the world. It will be key that people in all countries, not just rich countries receive the required protection.

South African government has embarked on a vaccination drive to mitigate the deadly effects of Covid-19 and apart from the challenge of getting vaccine in place, the other mammoth task which over the past few months has been to embark on a campaign drive to mobilise the entire population about the importance of vaccination. Vaccines are effective interventions that can reduce the high burden of diseases globally. However public vaccine hesitancy is a pressing problem for public health authorities.

### **2.10.1 Key points for strategic consideration:**

- Mental health problems are increasing amongst the youth because of increasing socio-economic pressures
- Slow implementation of the NHI is a cause for concern
- Poor nutrition and obesity threaten youth well-being
- HIV and AIDS infections are still highest amongst the youth – particularly young women
- Tuberculosis and HIV are the top two leading causes of death amongst young people
- There is a huge number of young people who are still not using condoms - usage is higher amongst males than females (probably because of power relations)
- Unnatural causes of death are highest amongst the youth because of violence and risky behaviour
- Alcohol consumption is high and on the increase amongst young people. Young males in the age category 20 to 34 are more likely to drink alcohol than many of the other age categories
- Substance abuse is an area of concern and is difficult to obtain national statistics – the mean age of those treated for drug abuse range from 25 to 30 years for all the provinces
- Covid-19 has not only taken lives, it has also shown the many limitations of our health system including unequal access, limited infrastructure and limited personnel
- The DoH, DBE, DHE and other key stakeholders should conduct Covid-19 vaccine awareness programmes to the socially vulnerable and hard to reach such as youth experiencing homelessness, and those with disabilities face a range of challenges in getting vaccinated against Covid-19.
- Key areas of concern for these youth groups include distrust of the authorities, language barrier, challenges in physically accessing vaccination sites, and fear of stigmatisation. Furthermore, these communities are often at elevated risk of infection due to sometimes sub-standard living conditions, which means that their need to be vaccinated is especially high.

## 2.11 Current challenges: Pillar 4 Social cohesion and nation building

South Africa is still a largely divided society despite efforts to entrench social cohesion. The divisions are exacerbated by inequalities currently estimated at a Gini-Coefficient of 0,68. Furthermore, research show that about 25% of the South African households own about 71% of the wealth of the country, while the bottom 60% owns only 7%. For historical reasons inequalities manifest in racial and gender terms. In 2016, the average annual household income for whites was R 681,631 compared to typical earning at R245,409. Given the scant change reflected in the employment and business ownership data, there is no reason to conclude that income inequalities have changed substantially. Cognisant of the unequal and racialised ownership of the economy, the NDP asserts that these ownership patterns need to be corrected. Amongst the youth inequality has manifested in unequal access and unequal outcomes in:

- i. Economic opportunities
- ii. Education and skills
- iii. Health and well-being
- iv. Living conditions
- v. Democratic and justice institutions

The South African Reconciliation Barometer (SARB) surveys have consistently rated inequality as the major stumbling block to reconciliation. This suggests that the key to reconciliation and social cohesion is dealing with inequalities at all levels of society. According to studies, common basis for discrimination that still need to be tackled includes class, race, gender, nationalism, ethnicity, and sexual orientation. Prejudice and stigmatisation based on the identities above are still prevalent against certain groups. These areas of discrimination also tend to work against social cohesion, and they are mainly driven by economic circumstances. For example, the youth show a high mean score for xenophobia with those aged 18-24 years at 3.13 and those aged 25–34 years at 3.03 compared age groups of 35 years and above at mean scores of below 3, meaning that the youth are more xenophobic compared to the adult population. This is linked to unfavourable socio-economic conditions that many young people are likely to find themselves in.

Youth participation in civic matters is low, though other studies point out that youth are use alternative platforms, like service delivery protests, social media, for participation. This could imply that platforms provided for youth participation are either irrelevant or inadequate or both. In fact, according to one study about that 55% of South African young people have an interest in public affairs, which is amongst the highest in Africa. However, measured in terms of traditional indicators such participation in elections, youth participation is low. For instance, nine million South Africans eligible to vote have not registered to vote, most of them young people, 46% of this group are aged 20 to 29, according to the Independent Electoral Commission (IEC). As we rapidly move towards the 4IR, it is important to exploit digital platforms to encourage youth participation.

Nation-building requires both the understanding of the democratic institutions and the participation of the youth in civic matters. The National Youth Development Agency Act asserts that one of the principles of youth development is the promotion of youth participation in:

- (i) Democratic processes.
- (ii) Community and civic decision-making; and
- (iii) Development at all levels

To achieve participation, educating and engaging the youth in ways that resonate with them becomes very important.

Arts and sports are some of the avenues that have a potential to contribute to social cohesion and open career avenues for young people. Improving the provision of sporting facilities and supporting art in schools and in communities.

Covid-19 has not only resulted in increased economic hardship and mental health challenges, but it has limited young people's ability to participate in public affairs and their freedom to participate in community and religious activities.

### **Sports, Arts and Culture**

Sports, arts and culture plays an important role in cognitive development of young people, in building physical and mental wellbeing of youth and in encouraging nation building and social cohesion.

Sport and other extra-curricular activities create opportunities for collegiality and with it the sense of belonging and school pride that is a critical ingredient of every good school. Sport builds healthy bodies, encourages self-discipline, grows confidence, and promotes positive social interaction. It is an essential component of good education, and it is not a coincidence that schools in which there are high participation rates in sport and other extra-curricular activities are also the schools that produce the best academic results.

The “Charter of Physical Activity, Play and Well-being for Children and Youth in South Africa” which was drawn up in the early 1990s after wide consultation by the Department of Exercise Science and Sports Medicine at the University of Cape Town, provides some useful insights into why sport is important for young people and includes the following points:

- South African youth are at increased risk of being inactive due to a lack of safe playing areas and sporting facilities, a lack of opportunities to be active, the increased use of technology-based entertainment and insufficient physical activity in the school day
- Attitudes to life-long physical activity and health are determined in part by both the parental attitude to activity and exercise in the home as well as the experience of young people in physical activity, sport and play during their time at school.
- Evidence from research suggests that school and community programmes that promote regular participation in physical activity and optimal nutritional choice in children could be among the most effective strategies for reducing the public health burden of chronic disease associated with sedentary lifestyles.

Evidence from extensive research investigating links between physical activity and brainfunction and physical activity and the academic performance of young people suggest that:

- Increased physical activity results in increased brain function and nourishment, higher energy and concentration levels, increased self-esteem, and better behaviour, all of which may improve learning.
- Brain function may benefit from physical activity due to increased energy generation as well as from time outside of the classroom or from studying or as a release from boredom.

One study, which compared the fitness levels and academic achievements on standardised tests of nearly two million pupils in Grades 3, 6 and 9, found a direct correlation between academic achievement and student fitness levels.

The educational value of sport and other extra-curricular activities to the holistic development of children is too important for it to be treated as a luxury. It is an essential element of what constitutes a good and proper education and should be part of the educational programme of every school. Parents can play an important part in this regard and should insist, through their representation on the school governing body, that the education programme of the school includes a range of extra- curricular activities including both team and individual sport.

Progressive suggestions have been made under the Presidential Youth Service for sports, arts and culture to play an important role under a youth solving youth solution whereby young people utilising existing public infrastructure support other young people.

## Active citizenry, social cohesion, and youth service

The National Development Plan 2030 indicates that in many respects, South Africa has an active and vocal citizenry, but an unintended outcome of government actions has been to reduce the incentive for citizens to be direct participants in their own development. To prevent this practice from being entrenched, the state must actively support and incentivise citizen engagement and citizens should:

- Actively seek opportunities for advancement, learning, experience, and opportunity.
- Work together with others in the community to advance development, resolve problems and raise the concerns of the voiceless and marginalised.
- Hold government, business and all leaders in society accountable for their actions.

Active citizenry and social activism is necessary for democracy and development to flourish. The state cannot merely act on behalf of the people – it must act with the people, working together with other institutions to provide opportunities for the advancement of all communities. All sectors of society, including the legislatures and judiciary, must ensure that the fruits of development accrue to the poorest and most marginalised, offsetting possible attempts by elites to protect their own interests at the expense of less-powerful communities.

Legislation provides numerous avenues for citizens to participate in governance beyond elections. Forums such as school governing bodies, ward committees, community policing forums and clinic committees provide voice to citizens and opportunities to shape the institutions closest to them. Communities can also participate in drafting local government plans. Despite these avenues, there is growing distance between citizens and the government.

Outbreaks of violence in some community protests reflect frustration not only over the pace of service delivery, but also concerns that communities are not being listened to sincerely.

Better communication, more honesty, and more humility by those in power would go a long way towards building a society that can solve problems collectively and peacefully. Citizens have a responsibility to dissuade leaders from taking narrow, short-sighted, and populist positions. Robust public discourse and a culture of peaceful protest will contribute to a deeper understanding of the challenges facing communities and reinforce accountability among elected officials. For example, if learning outcomes in a school are below their legitimate expectations, a community can help to remedy the situation by strengthening school governance, ensuring that learners and teachers are punctual, and that the support structures from public officials are effective. Civil society promotes development and community cohesion. In many poor communities, welfare nongovernmental organisations (NGOs) and other community-based organisations deliver vital social and employment programmes.

More work needs to be done to emphasise the responsibilities that citizens have in their own development and in working with others in society to resolve tensions and challenges. The refrain, “sit back and the state will deliver” must be challenged – it is neither realistic nor is it in keeping with South Africa’s system of government.

Social cohesion is also identified as a critical component of the National Development Plan and many targets are not achievable without social cohesion.

Youth service is a cross cutting measure, and it should exist at different levels and impact on all elements of the National Youth Policy:

- At basic education level, youth service must incorporate understanding the National Anthem, learning the Constitution and the Bill of Rights and Bill of Responsibilities, learning an indigenous language, understanding significance of National Days and National Symbols, and encouraged to participate in community service.
- At higher education level, a minimum hours of community service should be required prior to students graduating.
- National Days should encourage young people of all races to attend and to host events in commemoration of these days.
- All South Africans but particularly young South Africans to learn at least one indigenous language, business to encourage and reward employees who do so.
- Youth service programs must ensure that the element of service is placed at the forefront of these programs.
- The South African Defence Force should be supported for recruiting young people who are willing and able to serve.
- Workplaces must encourage and incentivise social cohesion and ongoing community service rather than ad-hoc community service.
- Sport and arts and culture plays an important role in promoting wellness and social cohesion. These activities must be supported at a community level and there should be cross community support of these activities.

### **Youth in conflict with the law**

A number of youths have already been negatively affected by challenges related to socio-economic disadvantage, limited opportunities for conventional success, family conflict and antisocial peer affiliation, while an equally high percentage of youth have been incarcerated for serious transgressions. As part of social cohesion, it becomes important that all persons defined as young person are attended to for their livelihood. There are young people that have been found in the country to have conflicted with the law. There are programs by the Department of correctional services that suggests that the youths are with rehabilitation. Since 1 April 2010, children who commit crime are dealt with in terms of the Child Justice Act (CJA), instead of the normal criminal procedure which is used for adults. The aim of the CJA is to set up a child justice system specifically for children in conflict with the law. “No child deserves to be left behind, even those children who find

themselves on the wrong side of the law. The NYDA remain committed to providing assistance and support to youth who have been in conflict with the law. These young individuals must not be lost in the criminal justice system, but rather empowered so that they can be proactive citizens once they are reintegrated back into society. These young people have history of incarceration while within the young ages.

### Youth vote

A glaring outcome of the 2019 National Elections was a declining youth vote. Nine million South Africans eligible to vote did not register to vote, most of them young people, 46% of this group are aged 20 to 29, according to the Independent Electoral Commission. Although South Africa does not differ substantially from other countries where voting is not compulsory, the lack of a youth vote may point to wider frustrations of young people with their socio-economic conditions.

It is important to engage young South Africans in the democratic process because it is often the start of active citizenry. It is also important to support the organisation of young people because it creates advocacy for key youth issues.

The Independent Electoral Commission, the NYDA and Parliament all have a role to play in creating bold and illustrative campaigns and awareness to engage young people in the democratic process and to encourage them to vote.

#### 2.11.1 Key Points for strategic consideration:

- Evidence suggest that it will be difficult to engender social cohesion without dealing with inequalities

- Youth are more likely to be prejudicial (e.g., xenophobic) because of their socio-economic circumstances
- There is huge youth appetite for participation in civic matters as manifested in other platforms such as social media and service delivery protests
- There is limited exploitation of digital platforms to facilitated youth participation
- Racism, sexism, tribalism, nationalism, regionalism, and ableism are still big problems that militate against social cohesion in South Africa
- Stigmatisation of youth with disabilities (including youth with Albinism) is also a challenge
- Support for sports and art still has room for improvement
- Covid-19 has curtailed the opportunities for the youth to participate in public affairs and any community or religious organisations

## 2.12 Current challenges: Pillar 5 Effective and responsive youth development machinery

One of the priorities of the current administration, reiterated over and over is 'building a capable state'. This implies amongst others, strengthening all state entities' abilities to execute their mandates and to deliver the national priorities. Secondly, it is important that youth development machinery talks to the broader policy framework to deal with poverty, inequality, and unemployment. The pillar of "effective and responsive youth development machinery" speaks to the policy imperative of strengthening capabilities and alignment as it pertains to youth development. Previous NYPs have recognised the myriad of policy instruments available to facilitate youth development and their limitations. However, the implementation of the recommended policy and programmatic interventions has been very slow. For instance, the proposal that all state organs should have a resourced youth focal point started in 2006, but to date few state organs have such. Part of the challenge in the strengthening the youth development machinery is that whilst state organs are required to factor youth development in their planning, ensuring that this happens has been a challenge. Partly because as the legislation stands the roles of different spheres of government, the roles of civil society and the private sector are not clear.

This document has outlined the differential government structures that are responsible for youth development. Although all of government should have a youth lens there are a few critical government structures which are key for youth policy implementation:

- Department of Basic Education.
- Department of Higher Education, including all Sector Training Education Authorities.
- Department of Health.
- Department of Small Business.
- Department of Sports, Arts and Culture.
- Department of Women
- Presidency through the Project Management Office.

The National Youth Development Agency is governed by the NYDA Act and currently the Act gives the NYDA the powers to set youth policy, coordinate youth development and be an implementation agent for all elements of youth development. The National Youth Development Branch in the Department of Women, Youth and Persons with Disabilities holds the view that it is responsible for the policy function associated with youth and the coordination of policy work. This should be clarified in the review of the NYDA Act. The determination through the review of the NYDA Act and political processes should then further be made on the coordination role of the NYDA as it relates to the rest of government does this coordination role require the NYDA to identify, collect and compile information as to governments implementation of youth development or should the NYDA hold a planning, monitoring and evaluation role as it relates to youth development and how does this impact on the work of the Department of Planning, Monitoring and Evaluation. In its current operations and structure NYDA is built to be an implementation agent and not a coordinating body and new capacity and restructuring will be required to make it an effective coordinating body. In the question of NYDA being an implementation agent, the review of the Act should determine which functions of implementation the NYDA should conduct – for example should the NYDA perform functions in Higher Education when there is in fact a Department of Higher Education.

The role of the Provincial Government and Local Government in youth development also needs to be considered. Provincial Governments as their main function implement basic education, health, social development as well as economic development. Local government implements basic and essential service delivery such as water, electricity, sanitation and land. It would not be uncommon to find one province or municipality having a well-resourced youth development function while another does not have any youth development activity. Some provinces and local municipalities have youth desks or youth directorates while others do not. While investment into youth development is welcomed, it is necessary that youth development programs align to the National Youth Policy and Integrated Youth Development Strategy. It is also in our view unnecessary for each structure (province and municipality) to design new youth development strategies. The NYP and IYDS should be used and adjusted for local context. National Government and the Cabinet have a role in determining whether youth development outside of basic education and social development is a function of provincial and local government, how far that function should extend and what is the relationship between the Department of Women, Youth and Persons with Disabilities, the NYDA and the Provincial and Local structures.

The Presidential Working Group on Youth is an important consultative structure that brings together, business, government, civil society and young people under the banner of the Presidency to provide young people with a platform to raise critical information and make recommendations.

A final recommendation is that there be one coordinating body that can oversee the workings of the different departments with regards to youth training and employment, accompanied by clear lines of accountability to a parliamentary portfolio committee for youth specifically.

### **2.12.1 Key institution in the youth development machinery**

Youth development by its very nature requires involvement of multiple players including all levels of government, the private sector, and civil society. Involvement of multiple stakeholders also makes co-ordination an important requirement.

This includes the following:

- Government departments
- Non – Governmental Organisations (NGOs)
- Youth Formations
- Institutions of Higher Learning
- Labour

### **2.12.2 National Youth Development Agency (NYDA)**

Jointly with the youth branch located in the Department of Women, Youth and Persons with Disabilities (DWYPD), the NYDA is responsible for co-ordination of youth programmes. This includes joint convening of state organs. It is important that NYDA participate in cluster and Forum of South African Directors-General (FOSAD) meetings to facilitate constant communication with other state organs through their executive authorities and their accounting officers to make co-ordination easier.

### **2.12.3 Youth units/ Focal points**

The youth sector led by the NYDA has advocated for the youth focal points at all levels of government, the private sector and civil society. Within state organs, the youth sector advocated for these structures which are to be in the accounting officer offices. The rationale for this being that the youth focal points are less likely to be ignored when they are not strategically positioned.

### **2.12.4 National Government**

The IYDS will be largely driven through the national departments in collaboration with the Department of Women, Youth and Persons with Disabilities. Outcome facilitators are very important to collaborate with in the crafting of IYDS to ensure that it is in concord with planning of the state organs. The national organs of the state are also expected to be provided with resources to implement IYDS programmes as outlined in the MTSF commitments. The opportunity to influence what other Departments are doing in the youth development space, must be driven quite strongly by both the Department of Women, Youth, NYDA and the Presidency.

### **2.12.5 National Treasury**

The National Treasury is an important player in the development of the countries as it makes sure that resources are made available for the various programmes proposed by state organs. Required resources are raised through the South African Revenue Services (SARS) and allocated in line with development priorities of the country.

### **2.12.6 Provincial government**

The Youth Directorates which operate in Provinces mainly through Offices of the Premiers and in Municipalities are often key linkages between National, Provincial and Local Government. They often share important working relationships with Provincial and Local youth representative organisations. The NYDA will forge partnerships with provincial government to implement youth programmes.

### **2.12.7 Local government**

Local government is expected to localize the IYDS to meet their youth development challenges. This means creating their own targets in line with their resources and needs. Furthermore, the NYDA has together with local government worked together in making sure local youth offices are decentralized to roll out NYDA programmes and to provide information services.

### **2.12.8 Civil society**

The biggest value of this sector is that they have a wealth of knowledge and experience about the needs of young people. Many civil society organisations are not only constituted by the youth, but they also implement various youth programmes. These programmes could be implemented in partnership with the NYDA and other state organs to increase their reach and efficacy. In addition, as a youth voice civil society also plays an important role in holding the NYDA and other stakeholders accountable in the implementation of IYDS.

### **2.12.9 Private sector performance assessment**

The private sector is the engine of growth. Successful businesses drive growth, create jobs and pay the taxes that finance services and investment. In developing countries, the private sector generates 90 per cent of jobs, funds 60 per cent of all investments and provides more than 80 per cent of government revenues. Private sector involvement in youth skills and employment take many forms but can be characterized as variations of public-private partnerships (PPPs). Although definitions vary, PPPs may be defined as a form of cooperation between the public sector and private sector actors such as businesses working toward a common goal, while sharing risks, resources, and competencies. More generally we can speak of "intersectoral partnerships" because these arrangements frequently also include nongovernmental organizations (NGOs) and other civil society organizations. Partnering with the private sector in youth development or employment initiatives is motivated by the need to ensure that the development of skills reflects actual or future needs in the labor market. For the private sector to deliver pro-poor growth, three interlinked and mutually reinforcing factors need to be in place:

- i) providing incentives for entrepreneurship and investment to support young people;
- ii) increasing productivity through competition and innovation;
- iii) harnessing international economic linkages through trade. The NYDA will also work with the YES programme in assessing how the private sector is making meaning contribution towards supporting young people.

### 2.12.10 Professionalization of youth work

The recognition of youth work through professionalization has potential to improve the quality of youth work by being attractive to talented professionals. Professionalising youth work has a huge potential to impact positively on youth development. However, despite numerous attempts since 2010 to professionalise youth work not much can be shown in terms of concrete achievements towards professionalisation.

### 2.12.11 Key points for strategic consideration

- Follow-up on recommendations has been very poor (e.g., professionalizing youth work)
- The amendment of the NYDA, which is currently underway, will deal with some of the limitation of the youth development machinery
- Many state organs have not fully played their role in youth development
- Lack of clarity on the roles of state organs, beyond factoring youth development priorities in their planning
- The legislation is not enough to empower NYDA to co-ordinate youth development programmes and as a result the agency depend on the good will of the state organs

## 2.13 Overarching themes in youth development

This section deals with themes that are cross-cutting and overlapping therefore could not fit neatly in any one category. These include the fourth industrial revolution (4IR) and ICTs, Gender discrimination, and youth research.

### 2.13.1 Gender

Despite the constitutional and legislative provisions to deal with gender discrimination, South Africa like many countries still discriminates based on gender to a large extent. The transformational agenda for women in South Africa is hindered by challenges that include patriarchal practices, the violation of women's rights, sex stereotyping and the gendered nature of women's roles, responsibilities, and work. All these elements continue to impede women's full enjoyment of freedom. The success of national efforts to build a united, prosperous and a non-sexist society is predicated upon confronting the culture of toxic masculinity, misogyny, hierarchies, and sexist languages that permeates society at all levels. Inadequate resourcing and budgetary allocations to the institutions and programmes that champion the gender agenda in the country limit interventions. Whilst women experience multiple challenges, two aspects will be discussed below to illustrate the point, which does not in any way suggest that the two are the only challenges.

### 2.13.2 Gender-based violence and femicide

Aspects of gender discrimination that are most problematic are gender-based violence and femicide. Gender-based violence and femicide have escalated to an epidemic level in South Africa. About 5,2% of young women aged between 18 and 24 have experienced violence by a sexual partner, while the figure of those aged 25-34 years is at 6,7%. Gender-based violence has increase by about 37% between 2019 and 2020. In the 2018/2019

reported cases report, 52420 cases of sexual offences were reported, and 41583 cases of rape were reported. The figures for these offences are likely to be much higher than the reported cases, as studies have shown that many victims still do not report sexual violation because of fear of secondary victimisation. Given the magnitude of GBV amongst women, GBV amongst men does not receive enough attention. Femicide has in the last five years increased exponentially.

### 2.13.3 Young women in business

Whilst all young people in business experience challenges that include limited access to funding, limited access to markets, young women feel the impact of these challenges disproportionately. Part of the oppression of young women emanates from unequal economic power between men and women. Supporting young women's businesses and other economic opportunities will contribute to disrupting these power relations. Interventions aimed at enabling youth businesses should factor gender inequalities.

#### 2.13.3.1 Key points for strategic consideration:

- Gender-based violence and femicide are on the increase
- Unequal access to economic opportunities between men and women is a big contributor to women abuse
- Figures for GBV are much high than reported - Fear of secondary victimization is a major factor contributing to under reporting

## 2.14 Youth with disabilities

Persons with disabilities constitute the world's largest minority which continues to experience barriers to participation in all aspects of life including the economy. These barriers take a variety of forms, including those relating to the physical environment or to information and communications technology (ICT), or those resulting from legislation or policy, or from societal attitudes and discrimination. The result is that persons with disabilities do not have equal access to socio-economic rights and services, including education, employment, health care, transportation, political and economic participation, or justice. The UN Convention on Rights of Persons with Disabilities use an encompassing definition of persons with disabilities, who are defined in Article 1 as including " ... those who have long-term physical, mental, intellectual or sensory impairments which in interaction with various barriers may hinder their full and effective participation in society on an equal basis with others.". This UN definition is applicable in this strategic approach. Youth with disabilities are an integral part of the South African society. Therefore, youth programmes must speak to their needs to correctly fulfil the principle of economic justice when dealing with opportunities that are intended to benefit young people across South Africa. It is critically that NYDA create an environment that will pursue reasonable accommodation for the youth with disabilities in all sectors within the society.

The following should be the strategic objectives as seen by the disability sector:

- To create an enabling environment that would promote the full participation of youth with disabilities in the youth development programmes generally and the NYDA programmes in particular;

- To develop proper mechanisms and capacities that would facilitate the integration of youth with disabilities in the programmes of the society;
- To identify and eliminate barriers to participation in economic opportunities;
- To optimize the use of special ICT in order to enhance active participation of youth with disabilities in the academic programmes;
- To establish and maintain partnerships with relevant internal and external stakeholders that are capable and qualified to advance the development of youth with disabilities in the society.

#### **2.14.1 Employment:**

The Constitution of South Africa protects the rights of people with disabilities. Using the Constitution as a foundation, the South African government introduced the Employment Equity Act, 1998 to redress inequalities and discrimination in the workplace. Under this law all employers are required to incorporate at least 2% disabled people in their workforce and regularly report to the Department of Employment and Labour (DEL) regarding their employment equity status. The government and private sector are currently well below this target and need to take serious action to rectify the situation.

The Employment Equity Act (no. 55 of 1998) defines persons with disabilities as follows: people who have a long-term or recurring, physical or mental impairment which substantially limits their prospects of entry into, or advancement in employment. The failure to implement a programme of employment for youth with disabilities, is a lack of consequence management in both the public and private sector. There are many qualified young persons with disabilities who are not employed because some institutions and companies are not implementing the legislation and policies that are in place to promote employment of people with disabilities. To increase the required percentage of persons with disabilities, the required strategic approach would be to absorb any young person with disability who would have been recruited under an internship or learnership programme. The government and private institutions must have a permanent plan for any young person with disability who would have been recruited in an internship and learnership programme. It is unfair to train youth with disabilities through an internship and learnership programme and fail to secure their employment interests whereas the percentage of disability employment in South Africa is very low.

#### **2.14.2 Economic Participation**

Young people with disabilities are struggling to access economic opportunities because of lack of support from the relevant stakeholders. It is important that youth with disabilities are prioritised in tender opportunities through set-asides for young people. Although legislation makes provision for business opportunities for people with disabilities, there are no tangible outcomes from government business opportunities set aside for persons with disabilities. In most institutions there are no business opportunities set aside for persons with disabilities. The improvement in the implementation of legislation could ensure accommodation of youth with disabilities. It would ensure that there are

programmes wherein both the private and public sector set aside business opportunities for youth with disabilities. Effective monitoring mechanism should be put in place to ensure that programmes supporting youth with disabilities are realised.

### **2.14.3 Academic opportunities:**

Education is one of the fundamental resources in transforming the lives of youth with disabilities. In terms of the higher education sector, students are not capacitated with adequate resources to perform their academic responsibilities. Most of the TVET colleges are neglected when it comes to capacitating youth with disabilities. For instance, students with disabilities are finding it difficult to cope under COVID19 circumstances due to lack of adequate resources. Consultation with persons with disabilities recommended that a national structure of students should be established in order to hold all institutions of higher education to account.

Young people with disabilities are not homogenous as there are different disabilities that require different interventions. The sector representing youth with disabilities proposes the establishment of a disability unit within NYDA to undertake to facilitate of all programmes aimed at transforming the lives of youth with disabilities.

### **2.14.4 Key strategic points for consideration**

- Discrimination and stigmatisation of people with disabilities
- Limited economic opportunities for people with disability
- Access to education limited and where there is access, it is inadequate
- There is also a tendency to lump people with disabilities together despite their different needs

## **2.15 The fourth industrial revolution, ICTs and youth development**

At the core of the fourth Industrial Revolution (4IR) is the Internet of Things (IoT), biotechnology, and Artificial Intelligence (AI). These elements have changed the way production and business are done. For the youth to survive in this new environment they need the necessary technological skills. Many analysts foresee the major breakthroughs of this revolution being made in the fields of autonomous vehicles, nanotechnology, quantum computing, 3D printing, artificial intelligence (AI) and robotics. South Africa has a potential to play a leading role in the development of new technologies that will be part of the Fourth Industrial Revolution if young people are appropriately skilled and prepared. It is contemplated that 4IR will come with new opportunities for young people.

To a large extent the fourth industrial revolution is driven by ICTs. In 2019, the President constituted a Presidential 4IR Commission, which is tasked with advising on policy and strategic matters related to 4IR. This include policies and strategies around skills gaps and youth unemployment as they relate to 4IR. Overall the intention is to formulate a proper response that will position South Africa to be prepared, including skilling and protecting jobs that are likely to be impacted adversely by 4IR.

Information and communication technologies (ICTs) is a cross-cutting area, which has huge potential to contribute to economic growth. Given that the enthusiastic youth uptake of ICTs, it is also a low hanging fruit. However, access to ICTs is still a problem with only 22,7% of South Africans owning a computer and only 9,1% with access to the internet at home<sup>15</sup>. Digital inequalities also manifest in geographic terms with 15,4% of those in metros, 7,2% of those in urban having access to internet at home as compared to only 1,2 % of those living in rural areas. The other barrier to digital access is high costs of data in South Africa.

### **2.15.1 Key points for strategic consideration:**

- Access to ICTs infrastructure (hardware and software) is still very low
- The high uptake of technologies by the youth could be harnessed for the benefit of the country
- There is a huge backlog of service delivery on the part of government and ICT provides an opportunity for government to look for innovative ways of delivering service to citizens whose majority are youth
- The print media sector remains one of the most untransformed sectors and therefore needs urgent attention for transformation. The barriers for transformation are numerous ranging from policy and regulatory frameworks to difficulties in implementing the current policy and its regulatory provisions
- Lack of access to information - there is a general lack of awareness, amongst the youth, on career and entrepreneurial opportunities that come with 4IR.
- High data costs in South Africa's mobile network operators are hindering young people from adequately accessing information. The network operators are not only charging more for data relative to the other countries in which they operate, but the gap between those prices keeps widening as data costs fall faster in other countries
- The nature of work is changing implying a risk of youth who are not technologically savvy to be locked out of economic opportunities
- Access is still largely determined by class, geographic location, race and gender.

### **2.16 Youth research**

One area that does not receive enough attention in this country is youth research. Whilst institutions like Statistics South Africa and the Human Sciences Research Council (HSRC) have generated useful studies on the youth, there are still many gaps. Many questions regarding youth development are still not answered, e.g.:

- How effective is our youth development model and how does it compare with other models?
- What happens to the youth who drop-out of school?

- Why is youth participation in entrepreneurship still very low despite all the institutions established to support entrepreneurship?
- What are the best ways of harnessing youth energies for participation in civic matters?
- It is one thing to say that a certain percentage of the youth is employed and it another thing to investigate the nature of those jobs – how decent are those jobs?

Secondly, the key players in youth development rely on other institutions for research, which may not necessarily answer questions that the key players want answered. Even the NYP is silent on youth research as an important and overarching aspect of youth development. Given the integrated and mainstreamed approach to youth development in South Africa, there is a huge potential for the NYDA to work with other institutions to generate relevant research.

### **2.16.1 Key points for strategic consideration**

- There are still many areas of youth development that still need research
- Key players in youth development rely on other institutions for research on young people
- Mainstreamed approach makes it easier to collaborate and to harness resources from other institutions

### **2.17 The impact of Covid-19 pandemic on the youth**

The coronavirus (COVID-19) pandemic has had severe global health and socio-economic impact. Latest statistics indicate that while the number youth and children killed by COVID-19 is relatively small compared to adults, measures to curb the spread of the virus, will impact the youth severely. According to the United Nations Children’s Fund (UNICEF), 99% of the children and youth under 18 years worldwide (2.34 billion) were impacted by lockdown restrictions to curb COVID-19. Furthermore, studies show that most of the businesses that closed because of Covid-19 were youth owned. Most people who lost employment were young people as reflected in the sharp spike in youth unemployment between quarter 4 in 2019 and quarter 4 in 2020. The loss of livelihood and the loss of loved ones has also increased mental health challenges amongst the youth – notably increase in depression.

The Presidential Employment Stimulus seeks to directly confront the impact of Covid-19, as part of government’s broader economic recovery agenda. These stimulus packages are intended to use direct public investment to support employment opportunities. If not addressed, the impact of the COVID-19 on the youth will perpetuate socio-economic problems of the youth, and ultimately undermine development prospects for South Africa. The youth should be at the centre of the post-COVID-19 recovery plans. Sectors like tourism, agribusiness, information and communication technology, and other services show potential for large scale productivity growth and job creation.

### 2.17.1. Introduction of Social Relief of Distress Grant

The South African government has since introduced a Social Relief of Distress grant, the Social Relief of Distress grant may be in the form of a food parcel or a voucher to buy food. Some provinces give this assistance in the form of cash. Social Relief of Distress grant is given for a short time only – usually for up to three months, as a temporary provision of assistance intended for persons in a dire material need that they are unable to meet their families’ most basic needs. Upon further review the government decided to extend the Distress Grant period to March 2022. Applications for the grant, which is set at R350, opened on 6 August 2021. The grant is set to benefit unemployed citizens, most of whom lost their jobs when COVID-19 struck in 2020.

The criteria for the grant was: South African citizens, permanent residents or refugees registered with Home Affairs; resident within the borders of the Republic of South Africa; above the age of 18; unemployed; not receiving any income; not receiving any social grant; not receiving any unemployment insurance benefit (UIF) and does not qualify to receive UIF ; not receiving a stipend from the National Student Financial Aid Scheme(NSFAS); not receiving any other government COVID-19 response support; and not a resident in a government funded or subsidised institution. (SASSA).

Applications for the grant, which is set at R350, opened in August 2021. The grant is set to benefit unemployed citizens, most of whom lost their jobs when COVID-19 struck in 2020. President Cyril Ramaphosa in February 2022 announced the reinstatement of the SRD grant, which is set to run until the end of March 2023. Over eight (8) million youth had already applied to this grant, with almost six (6) million applications being approved and benefiting from the programme.

#### Social Relief Fund of Distress Grant

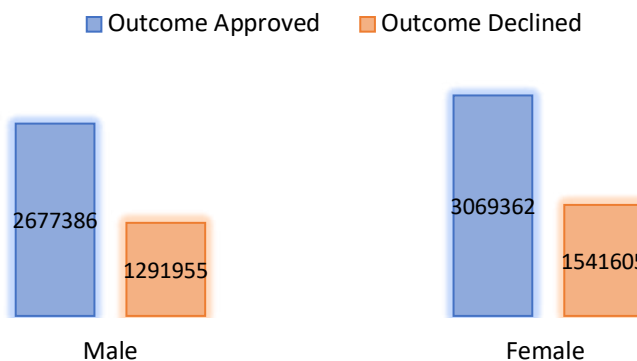

Kwa Zulu Natal (KZN) has the biggest percentage of approved applications with 24.5% of all youth approved applications. This is representation of 67.8% of the total youth applications from KZN. It was reported in the rapid assessment of the implementation and utilisation of the special Covid-19 SRD grant; DSD; July 2021, the results of the online survey show that far higher numbers of applicants are in metropolitan municipalities (urban areas) compared to district municipalities. This trend of urban bias was evident in all provinces with metros. The provinces of KwaZulu-Natal and Gauteng (18.2%) are examples used to illustrate the urban bias.

Province	Approved	Rejected	Pending
Gauteng	1044813	639832	57459
Mpumalanga	534242	246675	28695
Limpopo	841422	305829	30940
North West	400274	169288	20543
Free State	330574	130984	18007
Northern Cape	116372	64800	8690

Eastern Cape	742844	345821	39973
Western Cape	325769	328886	26035
Kwa Zulu Natal	1410438	601445	66404
<b>Total</b>	<b>5746748</b>	<b>2833560</b>	<b>296746</b>

*\*Table: National Youth Participation in SRD Grant*

To understand more about how the youth accessed the SRD grant, data was broken down to show how the different genders were represented.

**\*Figure: National Youth Application Outcome by Gender**

The female gender had more applications submitted in general. Data also shows that most approved and declined applications (53.6% & 54.4 % respectively) were from female applicants. The high decline rate can be attributed to applicants being recipients of other grants as we shall discover in chapters to follow.

## 2.18 Presidential Initiative for Youth Employment

Presidential Youth Employment Intervention is designed to transition transition young people along multiple pathways into the economy and to make government's support for young people more visible and effective by:

- Accelerating delivery by coordinating and streamlining government's response to youth unemployment
- Allow firms to expand and employ more young people
- Address the current cohort of young people that remains unemployed

To achieve these imperatives, the following table with 5 key interventions will be implemented and prioritized with a view to maximizing the impact of the different initiatives already underway.

**1. Pathway Management Network:** to view and access available learning and work opportunities and providing a range of support services.

**2. Workforce Solutions for Growing Jobs:** Implementing demand-led skills development programmes that allows 500 000 young people to develop the capabilities in growth sectors.

**3. Enabled Youth Self-employment and Township Enterprise:** stimulate economic activity in marginalised communities.

**4. Workplace-Based Experience:** Providing opportunities for workplace experience through the Youth Employment Service.

**5. Opportunity to do Service:** Expanding a Presidential Youth Service to provide 250 000 young people over five years with publicly funded opportunities to engage in service.

### Delivery model of the Presidential Youth Employment Intervention

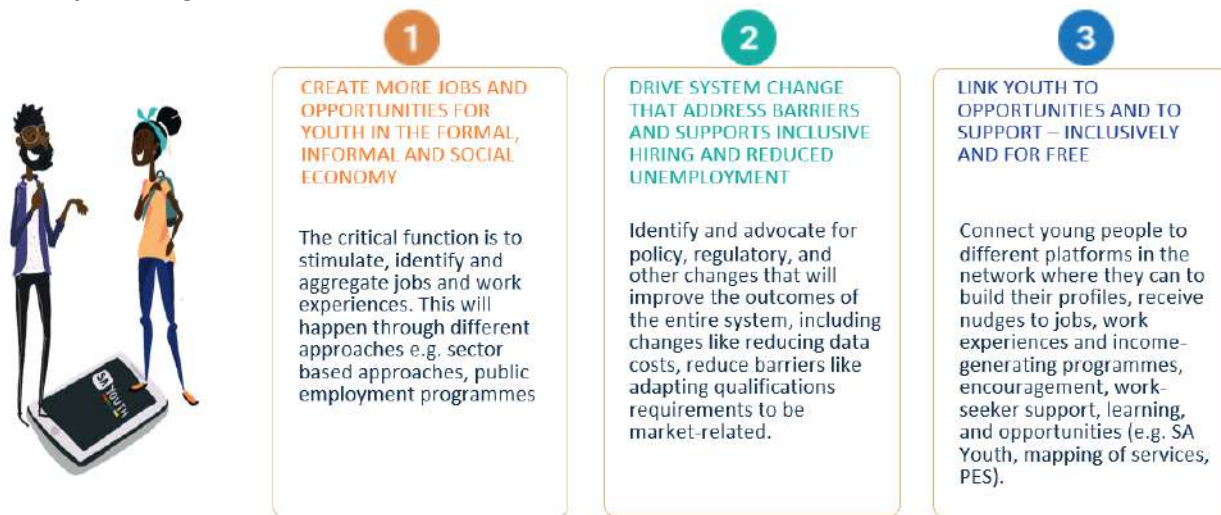

The Presidential Youth Employment Intervention is cross cutting across government leveraging the strengths of various government departments while bringing in the creativity and innovation of the private sector and civil society.

Supported by other spheres of government, development partners, private sector and civil society

The National Pathway Management Network of Networks that seeks to pathway young people into aggregated opportunities. Below is a graphical representation of the National Pathway Management Network:

The national Pathway Management Network is a central component of the PYEI designed to supports the country's PSET system.

# 3

## **Summary of the Socio-Economic Context**

### 3. Summary of the socio-economic context

Recognising the linkages between all areas of youth development should be central to any intervention. Class, gender, geographic location, living with disabilities underpin many of the challenges noted in this document. Youth with disabilities are often the most discriminated against as seen above that access to education, the labour market, and quality health often favour youth who do not have disabilities. Economic disparities are also a thread that runs through many of the challenges, which suggests that dealing with poverty and inequalities should be prioritised. Investing in economic opportunities, education, research, improve access to ICTs, and dealing gender inequalities have a great potential of improving the lives of young people. Covid-19 has impacted negatively on all aspects of life, threatening lives and livelihoods. Because of these diverse socio-economic conditions that different young people face, youth development interventions should put youth into different sectors e.g.:

- Youth heading households
- Youth in business
- Youth with disabilities
- Youth out-of-school
- Unemployed youth
- Youth abusing substance

An important point about developing intervention is to constantly look at what exists? What works rather than start from scratch every time. In other words, evaluation and impact studies are necessary.

# 4

## Limitations

## 4. Limitations

The development of the IYDS happens in the context of NYDA Act being amended, which might necessitate changes of the IYDS to be in line with the amendments to the act. Consultations with stakeholders, particularly young people were limited because of restriction of movement occasioned by Covid-19 pandemic. The bulk of the consultations were conducted on-line, which has its limitations like unequal access to digital resources.

The youth sector relies on data collected by other institutions, which means that availability of data depends on those institutions. The age categories used to collect data in South Africa tend to be incongruent with the legal definition of youth resulting in the exclusion of age 14 and 35 years. So, many studies used in the youth sector do not necessarily provide a complete picture of youth.

The following section outlines the proposed programmes to deal with the challenges flagged above.

# 5

## Implementation Plan

## 5. Implementation Plan

This implementation plan is intended to translate the challenges identified in NYP and in this document into a national programme with budgets, time frameworks, and lead implementors. Information-sharing, avoiding duplication and maximising impact are at the core of this plan. In the short term, government can immediately identify the youth-focused programmes it has established using this plan. Within the first year of IYDS being endorsed, the NYDA will establish the mechanisms to gather information on youth-focused initiatives managed by business and civil society. In each of the five strategic focus areas, all related programmes will be documented, and the information made accessible to supportive stakeholders. Linkages and opportunities for collaboration can be more easily identified and put into action, both with the involvement of the NYDA and through stakeholders working together directly.

### 5.1 PILLAR 1: Quality education, skills and second chances

Education and skills development are essential to improve the lives of young people and the nation. The positive link between economic performance and educated and skilled labour has been thoroughly documented. This part of the implementation plan is intended to formulate interventions responding to challenges documented earlier in this document. Amongst the proposed solutions are:

- Develop an intervention to mitigate high drop-out rates (especially from Grade 10) and Grade repetition
- Improving educational outcomes through improving quality
- Deal with socio-economic challenges that impact negatively on outcomes
- Improving access to ECD, which is still not universal despite studies showing that it impacts positively on later learning
- Improving access to post-school education and training is still low compared to similar countries
- Deal with higher education funding
- Deal with school infrastructure backlog in poor areas
- Prepare young people for 4IR
- Align linkages between colleges, SOE's and employers.
- Employers should be brought closer to SETA's and their offerings
- Training institutions must compete for resources wherein they should demonstrate cost-efficiency, quality, and relevance.
- Destigmatise TVET colleges and make them attractive.
- Devolve the management of training to talk to regional, sector and local levels
- Deal with barriers that militate against access to education by learners with disabilities.

### Role of NYDA in implementing Pillar 1:

NYDA should lobby for aligning linkages between colleges, SOE's and employers. Also, NYDA's role should be that employers should be brought closer to SETA's and their offerings. Working together with the Department of Labour to develop labor Market Intelligence mechanism for an up-to-date data on labor supply and demand to plan comprehensively. The Department of Basic Education relationship with NYDA continues to be a critical aspect of development of young people in the country, especially addressing issues of learner drop-out rate that remains high.

Strategic Outcome	Interventions	Lead Implementation Agent	Indicators	2024	Baseline
Youths better prepared for further studies and the world of work beyond Grade 9	Promote more effective approaches to teacher development, such as Professional Communities of Learning (PLCs) and technology-enhanced in-service training	DBE, PEDs, SACE	Number of districts in which teacher development has been conducted as per district improvement plan	2024: all Districts	New indicator
	Introduce the new sample-based Systemic Evaluation programme, in part to monitor progress against the Sustainable Development Goals (SDGs)	DBE, PEDs	New Systematic Evaluation is operational	In all Provinces by 2024	New indicator
	Build on past successes in improving learner access to textbooks and workbooks with a view to ensuring that no learners are without the books they need	SACE, PEDs, DBE	Percentage of learners with access to required maths and EFAL textbooks in Grades 6 and 9	2024: 100%	Grade 6: 85% (SMS 2017) 89%: Grade 9 (SMS 2017)
	Introduction of Coding and Robotics curriculum	SACE, PEDs, DBE	Coding and Robotics curriculum implemented	Coding and Robotics curriculum in place by 2023	New indicator
	Provision of training in specific sectors	DOT	Youth enrolled in the Sommelier Training Course	300 Wine Service Training Programme (Sommelier) with training on norms and standards for safe tourism operations, including COVID-19 Protocols implemented in two provinces for 252 unemployed and retrenched youth.	New indicator
			Percentage representation of youth.	≥ 30% representation of youth.	New indicator
	DOT	Youth were enrolled in the Hospitality Service Training Programme.	2000 Hospitality Youth Programme (HYP) Food and Beverage with training on norms and standards for safe tourism operations, including COVID-19 Protocols implemented in all nine provinces targeting 1000 unemployed and retrenched youth.	New indicator	

	Focus Schools introduced to nurture talent across different disciplines	DBE, PEDs	Number of Focus Schools for high-tech, maritime, aviation, arts and science	5 Focus Schools rolled out by 2024	166 ASIDI schools in 2018/19 (215 cumulatively from 2011)
	Build schools through ASIDI completed and handed over for use by 2024	DBE, PEDs, NECT, Implementing agents	Number of ASIDI schools completed and handed over for use	122 additional ASIDI schools completed and handed over for use (cumulatively 337 by 2024)	Planned infrastructure projects by school name and province for the coming 3 year – will be mapped on GIS.
	Proportion of schools identified through the SAFE project provided with appropriate sanitation facilities	DBE, PEDs, DPWI, NECT, private sector	Number of schools identified through SAFE programme have sanitation meeting minimum infrastructure norms	All schools identified through SAFE programme have sanitation meeting minimum infrastructure norms by 2024	DBE to provide after survey determining access to different electronic devices at these schools
School physical infrastructure and Environment that inspires learners to learn and teachers to teach	Leverage ICT related programmes to support learning	DBE, PEDs	Number of special and multi-grade schools with access to electronic devices (including tablets)	Target to be determined after the survey	New indicator
	Develop provincial infrastructure planning and monitoring capacity (including the Education Facility Management System or EFMS)	PEDs	Schools with access to ICT devices	All provinces meet their targets for ICT devices including tablets	New indicator
	Connect all schools working with DCDDT using different forms of connectivity	DBE	Education facility management system is developed at Provincial level	System will be operational by 2021	All high enrolment subject textbooks and workbooks digitised.
	Digitised text books	DBE, DCDDT	Number of schools connected for teaching and learning	All schools connection by 2024	Costed enrolment plans submitted
Expanded access to PSET opportunities	Implement enrolment plans for universities, TVET, CET colleges and training (2020-2024)	DHET (lead), DSI, NSA DEL, DALRRD, NSF, SETAs, FBOs, DBE, DSD, PEDs, Provincial DPW, NYDA, QCTO, Third stream income university	Enrolment plans in place for universities, TVET and CET colleges are developed and implemented	Five-year enrolment plans approved and all institutions enrol students accordingly,	New indicator
	Establish centres of specialisation to support students with disabilities in TVET colleges	DHET (lead), DSI, NSA DEL, DALRRD, NSF, SETAs, FBOs, DBE, DSD, PEDs, Provincial DPW, NYDA, QCTO, Third stream income university	Number of centres of specialisation to support students with disabilities in TVET Colleges established	4 by 2024	Outdated funding, norms, and standards in place

	Develop sustainable CETs funding model, including norms and standards	DHET (lead), DSI, NSA DEL, DALRRD, NSF, SETAs, FBOs, DBE, DSD, PEDs, Provincial DPW, NYDA OCTO, Third stream income university	New CET funding model, norms and standards in place	New CET funding model, norms and standards approved by 2021	Percentage of targets in the SLA met
SETAs identify increasing number of workplace-based opportunities and make information of work based learning known to the public	DHET (lead), DSI, NSA DEL, DALRRD, NSF, SETAs, FBOs, DBE, DSD, PEDs, Provincial DPW, NYDA OCTO, Third stream income university	Targets in the SLA between DHET and SETAs to improve performance are met	100%	No policy in place for dealing with the missing middle is in place	
Implement required agreements, financing systems, infrastructure frameworks and disability support to realise enrolment growth.	DHET Private Sector	NSFAS Policy in place for sustainable funding of students from poor background and from the 'missing middle' (guidelines, legislative review, effective oversight by DHET)	Sustainable policy on the missing middle adopted and implemented	Weak NSFAS IT system	
Promote the take up of artisanal trades as career choices among youth	DHET Private Sector	Efficient NSFAS IT system in place	Elimination of delays in disbursement of NSFAS funds	Artisan registration: 31 375 (2018)	
Ensure eligible students receive funding through NSFAS bursaries (through guidelines, policy legislative review, effective oversight of NSFAS by DHET and improve management	DHET	Number of learners entering artisanal programmes annually	Artisan registrations: 36 375	2019 guidelines	
	DHET (lead), DSI, NSA, DEL, DALRRD, NSF, SETAs, FBOs, DBE, DSD, PEDs, Provincial DPW, NYDA OCTO, Third stream income university	Guidelines for the DHET bursary scheme for students at public universities approved by the Minister in December annually	Guidelines for the DHET bursary scheme for students at public universities approved by the Minister in December annually for the following academic year	2019 guidelines	
	DHET		400 000 TVET	2019 guidelines	
	DEL DSI		450 000 University	2019 guidelines	
			Not <24 400 (Cumulative)	2019 guidelines	
			116 000	2019 guidelines	
			18 000	2019 guidelines	
			150 000		
			9 016	2019 guidelines	
			80 000	Enrolment for 2018 was 1969	

	Attract, recruit and train young people to pursue careers in the agricultural sector value chain by enrolling them into applicable programs	DHET	Number of students enrolled in diploma in agriculture at agricultural colleges	Cumulative enrollment target for 2024 is 4 327 (DALRRD)	List of TVET college projects attached for monitoring	
	Implement macro infrastructure framework at universities, TVET and CET colleges	DHET	Program to build, refurbish, maintain and expand universities, TVET and CET colleges is implemented on time	All budgeted infrastructure Projects are completed on time	New indicator	
	Advocate the use of Open Access LTSM in TVET Colleges	DHET	Advocacy campaign on the use of Open Access LTSM is undertaken	Advocacy campaigns on the use of Open Access LTSM conducted annually	New indicator	
	Implement capacity building programmes and interventions at universities	DHET	Evaluations of student support services at TVET colleges universities	Lessons implemented in revamping student services	368 (TVET)	
	Increase the number of TVET students attending foundation courses	DHET	Number of TVET students enrolled in the prevocational learning programme (PLP) annually	7 000	Current backlog for NATED is 15 862 and 4 828 for N(CV (2018 POA)	
Improved success and efficiency of the PSET system	Eradicate NATED and NCV certification backlog	DHET	Percentage improvement in the eradication of certification backlog	100% by 2024	Current IT exam system	
	Implement IT examination system for TVET Colleges	DHET	New IT examination system is implemented	New IT system in place and implemented by 2021	Old policy in place	
		DHET	Policy on number of national assessment for TVET in place	New policy in place by 2021	Old policy in place	
		DHET			13 000	Old policy in place
					26 500	Old policy in place
					55 000	Old policy in place
					53 000	Old policy in place
					11 000	Old policy in place
				128 000	Old policy in place	

	Promote entrepreneurship in TVET colleges through the establishment of hubs	DHET	Number of hubs established to promote entrepreneurship	9 hubs	New indicator
	Introduce compulsory digital skills training specific to programme offerings at TVET colleges	DHET	Number of TVET colleges with compulsory digital skills training	25	New indicator
	Strengthen skills Planning	DHET	SETAs develop credible sector plans, which include forecasting	SETAs fund programs identified through research that meet the needs of emerging and small enterprises in TVET and CETC	New indicator
	CET college skills programme piloted around community needs	DHET	Percentage of NEET taking part in CETC occupational skills programs becoming economically active	90% NEET taking part in CETCs becoming economically active	26 Universities
	Support universities to implement student-focused entrepreneurship programmes	DHET	Number of PSET institutions that are implementing student-focused entrepreneurship development activities	All PSET institutions	New indicator
	Conduct IP awareness sessions (IP Wise) at TVET colleges (at least two per annum)	DSI	Number of IP awareness sessions in TVET colleges conducted	At least two per Annum	New indicator
			Number of people reached through outreach, awareness and training programmes in Space Science	600 000 (cumulative) (120 000 people per year)	Mid-year population Estimate Report
	Targeted programmes to up-scale existing campaigns and programmes on new HIV infections among youth, women and persons with disabilities	NDOH DBE DHE DWYPD	HIV prevalence rate by gender, age and disability	Half the HIV prevalence by 2024	Annual Reports by key departments
	Targeted programme on adolescent sexual and reproductive health and rights, including addressing teenage pregnancies and risky behaviour	NDOH DBE DSD DHET DWYPD	Percentage of teenagers reached through intervention programs by gender age and disability	100% reached	No baseline
	Mainstream gender, youth and disability issues in programs on access to universal education, life skills, skills development and training and in different field of study, including STEM	DBE DHET DWYPD	Level of mainstreaming in targeted programmes	100% compliance	New Indicator
	Improved educational and health outcomes and skills development for all girls, youth and persons with disabilities				

## 5.2 PILLAR 2: Economic transformation, entrepreneurship, and job creation

The NDP provides a long-term vision through 2030 for accelerating GDP growth so that unemployment and inequality can be reduced, thereby creating a more inclusive society. This will be achieved through the implementation plans and programmes, in particular the Industrial Policy Action Plan (IPAP) and the National Infrastructure Plan to reindustrialise and support economic diversification. Reducing South Africa's high levels of youth unemployment requires the economy to be on a labour-absorbing growth path. This will require a balance between creating a stable and supportive environment for growth and investment while at the same time addressing the many structural challenges our economy and society face. In addition to long-standing regulatory, infrastructure and skills weaknesses, inequality in itself has become a core obstacle to investment and growth. By extension, efforts to support growth must simultaneously ensure more equitable distribution of ownership and income with a greater focus on supporting young people into productive economic activity. Specific measures to support growth include:

- Stimulating economic growth through supporting entrepreneurship, improve energy generation capacity
- Tackle poverty and inequalities,
- Taking steps to address skills shortage among young people including preparing the for the 4IR
- Support industries that are labour-intensive
- Develop an intervention to deal with NEET
- Ensuring that the regulatory framework avoids unnecessary costs to producers and supports sustainable investment. Simultaneously, it must encourage employment creation and economic inclusion of young people into mainstream economic activity.
- EPWP and CWP should rather serve as exit plan in the training of youth
- IYDS consider implementing a job seekers fund linked to the programmes currently available at the NYDA.
- Youth to take advantage of the waste recycling sector as a way of informal employment.
- 

Priority will be given to employment-intensive programmes and initiatives, especially those that target the youth and women. Investment in new sources of growth will be encouraged and incentivised. Achieving this aim will depend crucially on the implementation of the National Infrastructure Plan. This should be done in ways that gather in productive investment both by users of the infrastructure and suppliers of inputs, driving growth in order to support:

- Productive sectors and exports;
- African regional development;
- Ability of the education and skills systems to meet economic needs;

- Expanding public employment schemes, including the proposed youth brigades;
- Empowered communities;
- Equal pay for equal work
- A deliberate move towards a skills development approach;
- Investigate a possibility of multiple exit points for young people;
- youth involvement in serving communities;
- Towards a rural biased development;
- Agricultural production and employment.

### Role of NYDA in implementing Pillar 2:

NYDA needs to foster collaboration of stakeholders, this can be achieved by the collaborative effort between (Private and public) institutions mandated with youth development. More collaborative effort, rather than working in silos will do good towards achieving the targets of the IYDS. Not only is programmatic collaboration but the joining together the scarce resources towards youth development.

Achieving significantly higher growth is necessary, although not sufficient, to address these core socio-economic challenges. The NYP 2020 states as the first priority, support for active economic participation and the transformation of the youth. The table below outlines the action that will be undertaken towards youth economic participation.

Strategic Outcome	Interventions	Lead Implementation Agent	Indicators	2024 Targets	Baseline
<b>More decent jobs created and sustained, with youth, women and persons with disabilities prioritised</b>	Create jobs through Job Summit Commitments Operation Phakisa and other public sector employment programmes	DLE	Number of jobs created per year through Job Summit initiatives	275 000 jobs created per year until 2024	New indicator
		DPME	Number of Jobs created through Operation Phakisa	402 950 jobs created by 2024	9 146
		DPWI	Number of work opportunities reported through other public employment programmes	5 million work opportunities created by 2024	4.4 million work opportunities
	Department of Justice	Number of jobs opportunities created	Youth Employment – 30%	New indicator	
	Implement Presidential comprehensive youth employment intervention	DEL Presidency	Number of youth NEET absorbed in employment	1 million youth jobs by 2024	New indicator

	Create an enabling environment for employment through policy and regulations	DEL	Draft employment policy developed, consulted, piloted and implemented	Employment policy drafted and implemented by 2024	New indicator
Investing for accelerated inclusive growth	Improve the ease of doing business	DTIC NT	World Bank Ease of Doing Business ranking	Improve overall ranking to within the top 50 countries by 2024.  Achieve top 50 ranking on indicators such as Starting a Business, Trading Across Borders, Registering Property, Construction Permits, and top 25 ranking on Paying Taxes	<p>Visa regime revised.</p> <p>85 of critical skills visas adjudicated within 4 weeks for applications processed within RSA.</p> <p>Ranked 82<sup>nd</sup>, 2019</p>
		DHA	Revise the visa regime to support importation of critical skills, and improve processing turnaround time	Implementation of revised visa regime  95% of visa applications adjudicated in 4 weeks by 2022	

Demand skills planning to support growth	Ensure the macroeconomic policy alignment and coherence	DHET DEL	Skills Priority Plan developed	Skills Priority Plan developed by 2020	New indicator	
		NT DTIC	Macroeconomic policy reviewed to support growth	Macroeconomic policy framework reviewed by 2022	Fiscal consolidation, inflation target 3 – 6%.	
		NT DEFF DPME DMRE	Framework for a just transition to a low carbon economy developed and implemented	Framework for a just transition to a low carbon economy developed and implemented by 2022	New indicator	
		DTIC	Legislation to establish threshold and conditions	Percentage of B-BBEE transactions with worker and community ownership	New indicator	
		DTIC	Percentage of B-BBEE transactions with worker and community ownership	3% of transaction value accrue to workers and communities	New indicator	
		DEL	Number of EEA inspections	1 640 EEA inspections conducted per year	2 063 EEA inspections conducted in 2018/19	
		DTIC All Departments identified as	Masterplans developed	All master plans developed by end of 2021	Automotive and CTLF Masterplans	
		DTIC	Review B-BBEE to support worker empowerment and establish legislation for worker, community and HDI ownership			
		DEL	Ensure the implementation of the Employment Equity Act (EEA) to eliminate gender and race wage disparity			
		DTIC	Create a conducive environment that enables national priority sectors to support industrialisation and localisation, leading to			

<p>improved exports, employment, and youth- and women-owned SMME participation</p>	<p>national priority sectors</p>	<p>National priority sectors grow contribution to GDP growth of 3% and exports increase by 4%</p>	<p>Exports for national priority sectors increased by 4%</p>	<p>New indicator</p>				
					<p>DTIC</p>	<p>Complete the revitalisation of industrialisation parks</p>	<p>All industrial parks revitalised</p>	<p>15 industrial parks</p>
<p>Support localisation and industrialisation through government procurement</p>	<p>DCDT</p>	<p>High demand spectrum allocated</p>	<p>4G coverage of high demand spectrum allocated by end of 2020 Inquiry into the licensing framework for 5G within 6 months after the World Radio Communications Conference 2019</p>	<p>Policy directive issued.</p>				
					<p>Spectrum licensing, broadband rollout and reducing the cost of communications</p>	<p>High demand spectrum allocated</p>	<p>100% compliance</p>	<p>New indicator</p>
<p><b>Improve competitiveness through ICT adoption</b></p>								

			DCDT	Percentage increase in broadband penetration.	80% of population have access to the internet by 2024	54% population have access to internet
			DCDT	Competitive reduction in data cost and the eradication of skewed price setting by dominant players	South Africa will be the cheapest in Africa for 1G data by 2024	South Africa is ranked 31 <sup>st</sup> in Africa for the price of 1G data based on the Competition Commission (2018)
	Increased investment in gross expenditure on research and development	DSI	DSI	Gross expenditure on research and development as a percentage of GDP	1.1% of GDP by 2024	0.82% of GDP in 2016/17
	Commercialisation of Public Sector funded IP	DSI	DSI	No. of disclosures which are licensed annually	35	15
<b>Reduced concentration and monopolies and expanded small business sector</b>	Reduce high levels of economic concentration through rigorous implementation of the Competition Act and other regulations	DTIC	DTIC	Number of market inquiries into historically concentrated priority sectors	Initiate one new market inquiry and implementation of recommendations of one concluded market inquiry per annum	New indicator
	Facilitate the increase in number of competitive small businesses with a focus on township economies and rural development	DSBD	DSBD	Number of competitive small businesses and cooperatives supported	200 000 competitive small businesses and cooperatives supported	New indicator

	Strengthen development finance towards SMME development	DSBD DTIC NT	Improved access to affordable finance for SMMEs and cooperatives	At least 50% of national and provincial DFI financing to SMMEs and cooperatives	New indicator
	SMME development through incubation centres and digital hubs	DSBD	Number of incubation centres and digital hubs established	270 established by 2024	73
	Ensure inclusion of SMMEs in localisation and buy local campaigns	DSBD DTIC	Provisions made in accords and interventions for SMMEs	Localisation policy paper on SMMEs development and adopted by 2021	New indicator
<b>Quality and quantum of investment to support growth and job creation improved</b>	Explore the introduction of measures (such as tax breaks) to support the establishment of new, youth owned start-ups	DSBS NT DTIC	Number of youth business start-ups	100 000 youth business start-ups per annum	New indicator
	Improve the quality and rate of infrastructure investment	NT Presidency DPWI	Infrastructure Fund established and operationalised	R100 billion Infrastructure Fund established and operationalised, with R5 billion leveraged by 2020	New indicator
		NT	Infrastructure expenditure	R1 trillion invested by 2024	New indicator
<b>Supply of energy secured</b>	Improve energy availability factor to ensure constant supply of electricity	DPME DMRE	Increased energy availability factor	Above 80% by 2024	73.74%

Increased economic participation, ownership, access to resources, opportunities and wage equality for women, youth and persons with disabilities	Develop, implement, support and monitor programmes for equitable job creation, representation and ownership by women, youth and persons with disabilities	DSBD DTIC DWYPD DPWI DEL	Proportion of youth, women and persons with disabilities	investment decision made	25 Year Review reports.
	Expand government spend on women, youth and persons with disabilities through preferential procurement	NT DSBD DTIC DWYPD	Percentage preferential procurement spend by sex/gender, age and disability	Minimum targets as defined for women, youth and persons with disabilities	Black women Owned – 11.49% (2017/18). Minority black women 9.68% in 2017/18 Black Disabled Persons (R239 million in 2017/18).
	Programmes to expand access to finance, incentives and opportunities for women, youth and persons with disabilities-led and owned businesses	DSBD DTIC SARS DALRRD NT DWYP	Percentage funding by sex/gender, age and disability, industry/sector	Minimum targets as defined for women, youth and persons with disabilities	Baseline unknown.

	Programmes to expand access to and ownership of land by women, youth and persons with disabilities	DHS DWYYPD DALRRD	Percentage hectares of land by sex/gender, age and disability	(Land Audit Report)	Land Audit Report.
	Support young people in high-risk businesses, such as technology, innovation and digital	NYDA DSBD	Number of businesses supported	15 000 Youth Start-ups supported	New indicator

### 5.3 PILLAR 3: Physical and mental health promotion including mitigating against pandemics

Health and well-being are the central pillars of youth development. Healthy youth are more likely to participate and contribute meaningfully to society. However, our health system is characterised by unequal access and unequal outcomes. In response to unequal access to health, the government has formulated the National Health Insurance (NHI). The insurance is a key national intervention to ensure universal access to quality health care, social solidarity through cross subsidisation, and equity. Areas that need attention include:

- Deal with the increasing mental health issues amongst the youth
- Supporting healthy lifestyles
- Promotion of sexual and reproductive rights
- Combating substance abuse.
- Include diversity and sexuality training.
- Add support services such as family planning and PrEP services.
- Advocate for the speeding up of the development of the implementation framework of the GBVF NSP and action GBVF response.
- High prevalence of HIV and AIDS amongst young people
- Find ways to mitigate risky behaviour amongst the youth
- The threat of Covid-19 has resulted in young people not accessing their medication.

#### Role of NYDA in implementing Pillar 3:

It is essential for NYDA to Support the Comprehensive Sexuality Education (CSE) Programme in schools to ensure Sexual and Reproductive Health Rights and Education (SRHRE) is elevated through the following actions:

- Include diversity and sexuality training.
- Add support services such as family planning and PrEP services.
- Advocate for the speeding up of the development of the implementation framework of the GBVF NSP and action GBVF response – DWYPD

NYDA needs to play a key role towards populating and integrating the National Adolescence and Youth Health Policy 2017 – 2022 as well as the National Strategic Plan on STIs, HIV and TB (areas concerning youth) and ensure alignment with other youth health policies and the NYP2030.

NYDA needs to invest in efforts for strengthening accessibility of chronic medication and SRH preventative tools (family planning services, PrEP etc) must be mainstreamed. (Responsible department NDoH).

The NYDA must work with NDoH to develop the comprehensive policy and legislative framework, by making sure that young people are part of the consultative process towards its development. NYDA must advocate for youth to be prioritised in the processes of “absorbing over 50 000 Community Health Workers into the public health system by March 2024”. NYDA must therefore indicate a percentage of young

people that will be employed in the 50 000, the Commission suggests at least 60% of positions must go to eligible young people and must prioritise currently unemployed youth. The NDoH should give NYDA a certain budget allocation for information dissemination on these issues, as they have a direct effect on SRHR.

NYDA needs to play a clear role in ensuring that young people have the necessary financial means to access the health care facilities and engage NDoH to roll-out mobile services in marginalised areas where the affected youth live. Participants stressed the need for the NYDA to focus on Mental Health through awareness raising and disseminating self-help interventions for young people, as well as creating a referral list for young people to know where to obtain services telephonically, virtually and physically.

Strategic Outcome	Interventions	Lead Implementation Agent	Indicators	2022/25	Baseline
Universal health coverage for all South Africans achieved by 2030	Enabling legal framework created for the implementation of NHI Bill	NDOH	NHI Fund established and purchasing services operational	NHI Fund operational by December 2020 NHI Fund purchasing services by 2022/23	NHI fund Bill enabling creation of NHI Fund was released for public comment in August 2019.
	Roll out a quality health improvement programme in public health facilities to ensure that they meet the quality standards required for certification and accreditation for NHI	NDOH	Proportion of public sector facilities implementing the National Quality Improvement Programme	80% by 2022/23 100% by 2024/25	National Quality Improvement Programme development.
	Develop a comprehensive policy and legislative framework to mitigate the risks related to medical litigation	NDOH	Total rand value of medico-legal claims in the public sector	Contingent liability of medico-legal cases reduced by 80% (under R18 billion) in 2024	70 billion in 2018
	Improved quality of primary healthcare services through expansion of the Ideal Clinic Programme	NDOH	Number of clinics attaining Ideal Clinic status	3 467 by 2024 100% PHC facilities maintain their Ideal Clinic status by 2024	2 035 in 2019
	Develop and implement a HRH strategy 2030 and HRH plan 2020/21-2024/25 to address the	NDOH	Human Resources for Health (HRH) Plan 2020/21 - 2024/25 Completed	Human Resources for Health (HRH) Plan 2020/21- 2024/25 completed by March 2020	HRH PALAN 2012 – 2017 reviewed

<p><b>Progressive improvement in the total life expectancy of South Africans</b></p>	<p>human resources requirements, including filling critical vacant posts for full implementation of universal healthcare</p> <p>Establish provincial nursing colleges with satellite campuses in all 9 provinces</p>	<p>NDOH</p>	<p>HRH Strategy 2030 completed</p>	<p>HRH Strategy 2030 produced by March 2020</p>	<p>HRH Plan 2012 – 2017.</p>
	<p>Expand the primary healthcare system by absorbing over 50 000 community health workers (CHWs) into the public health system. Within five years, the number of community health workers will be doubled and deployed in our villages, townships and informal settlements to serve our people</p>	<p>NDOH</p>	<p>Number of nursing colleges established</p> <p>Number of Community Health Workers (CHWs) integrated into the health system</p>	<p>One nursing college per province (with satellite campuses) established by 2020 and fully operational in all nine provinces by 2022</p> <p>50 000 CHWs by March 2024</p>	<p>New basic nursing qualification programmes development in 2017/18.</p> <p>Draft norms and standard guidelines for clinical training platforms were also developed.</p> <p>CHW policy finalised in 2018.</p> <p>40 000 CHWs in the health system, contracted mainly through NGOs/CBOs.</p>
<p>Drive national health wellness and healthy lifestyle campaigns to reduce the burden of disease and ill health</p>	<p>NDOH</p>	<p>Number of people screened for TB</p> <p>TB treatment success rate</p>	<p>2 million additional people screened for TB by 2020 and eligible people initiated on treatment</p> <p>90% by 2022 95% by 2024</p>	<p>48 991 695 people screened during 2014 – 2018.</p> <p>84.7% in 2018</p>	

					Proportion of people living with HIV who know their status	90% by 2020 95% by 2024	91% in 2019

## 5.4 PILLAR 4 Social cohesion and nation-building

The IYDS 2022/25 places young people at the centre of creating unity of purpose because it is needed to overcome obstacles that prevent prosperity and equity. Young people must take the lead in realising the constitutional dream of a united, non-sexist, non-racial democratic, prosperous and equal society. The IYDS 2022/25 period must be characterised by universal knowledge of the Constitution and the values enshrined therein as well as national symbols which condense the knowledge, values, history and memories associated with one's nation. The period will be characterised by young people driving transformation while confronting racism, sexism, and being at the forefront of cultural, economic, social and spatial redress initiatives. The IYDS 2022/25 focuses on:

- Dealing with poverty and inequalities
- Knowledge of the Constitution and fostering constitutional values;
- Confronting discrimination and systematic racism; and
- Fostering leadership and active citizenry
- Harness the alternative ways that youth use to participate - e.g. digital platforms
- Government and civil society should develop programmes that promote intercultural learning and raise awareness around xenophobia
- Representation of all genders and sexualities in all three tiers of government.
- Education on various disabilities for regular citizens is essential.
- SA's reconciliation process needs to be reconsidered to consider factors that have changed since apartheid and those that have remained constant.

### GBVF – Gender-Based Violence and Femicide

Youth voices must be included in strategies to stop GBVF. It is critically important that the voices of young people are heard in decision-making and policy structures when it comes to dealing effectively with gender-based violence and femicide (GBVF) in our society, as they are the future leaders of South Africa and can help shape a more inclusive, safer nation. In fact, young people are already contributing to the resilience of their communities, proposing innovative solutions, driving social progress and inspiring political change, in urban as well as rural areas. This potential has been seen through their activism and organising related to gender inequality, GBV and making feminist change possible. Young people are a major human resource for development, often acting as key agents for social change, economic expansion and innovation. Their imagination, ideals, energy and vision are essential for the continuous development of society. Five ways to be considered by government in responding to violence against women and children:

- Expansion of helplines and information sharing.
- Funding shelters and other safe accommodation options for survivors.
- Expansion of access to services for survivors.
- Limiting risk factors associated with violence.

- Modifications to family law and justice system.

#### Role of NYDA in implementing Pillar 4:

NYDA needs to ensure that Intercultural dialogues should be encouraged to mitigate against conflict. These dialogues should focus on the youth to ensure continuous cultural tolerance. The agency will make sure that international travel by South African youth should be encouraged to gain a better appreciation of their connection to the rest of the continent and the world. NYDA will continue lobbying for the upskilling rural areas to bridge the digital divide that breaks social cohesion by participation of private and civil organisations.

National Youth Service (NYS) can serve as a catalyst and integrate with other civil organizations to build ideologies with cultural understanding. Usage of cultural and creative ways to grow the economy ensure we are having a dialogue for 11 official languages and address various social data points.

Strategic Outcome	Interventions	Lead Implementation Agent	Indicators	2022/25	Baseline
Fostering constitutional values	Enact Hate Speech and Hate Crimes Bill	DOJ CD	Hate Speech and Hate Crimes Bill enacted	Hate Speech and Hate Crimes Bill enacted by 2020	Hate speech Bill
	Promote Constitution and its values in schools, awareness campaigns (print & electronic media), public engagements and dialogues	DBE	% of public schools reciting the Constitution in school assemblies and DBE organised events	100% of public schools reciting the Constitution in the School Assemblies by 2024	3000 schools

## 5.5 PILLAR 5: Effective and responsive youth development machinery

In line with the NDP's goal of creating a capable state through professionalising the public service, in the youth sector, building capacity for the youth sector entails strengthening key institutions dedicated to deliver services to the youth and ensuring that youth development practitioners as primary providers of services are adequately skilled and competent. As described in the NDP, there is unevenness in capacity that leads to uneven performance in the public service. This is also the case with the youth sector. There are challenges in achieving effective mainstreaming of youth development interventions across all spheres of government.

Therefore, steps are needed to strengthen the entire youth development machinery, enhance youth workers' morale, and clarify lines of accountability. These steps should be guided by the need for long-term policy stability and maximised impact within the youth sector. The actions contained here are not merely about technical solutions, but also about creating the conditions for a professional ethos within the youth sector, founded on a strong developmental commitment. The core objective is to put in place the youth development mechanisms and structures that can support departments in developing their capacity and professional ethos. This requires a more proactive role in supporting departments to build their own capacity; fulfil regulatory requirements; and improve service delivery. This strategy, therefore, focuses on providing more effective support to the youth sector to ensure an optimised youth development machinery.

The following have been identified as critical priorities to be pursued by the work stream on optimising youth development machinery:

- A well-co-ordinated youth sector;
- Increased responsiveness of the NYDA;
- Improved inter-departmental collaboration and institutionalisation of youth work;
- Increased mainstreaming of youth development;
- Better conceptualisation of youth development interventions;
- Improved inter-sectoral collaboration and consolidated voice of the youth;
- Capable youth workforce and regulated youth-focused sector; and
- Co-ordinated international relations engagements.

### Role of NYDA in implementing Pillar 5:

NYDA IYDS implementation plan to achieve the envisioned integrated, holistic, and comprehensive youth development:

Establishment and Development of a National Guideline on Meaningful Youth Engagement, for government, business, and civil society sector stakeholders to be informed on best practices to employ when engaging the youth demographic, for measurable and sustainable impact. The National Guideline should be used as a tool

to guide public service sector on meaningful strategies to incorporate in their action plans to effectively involve young people in its processes; and will ensure that government's involvement of young people is intensive, sustainable, measurable, and non-tokenistic. The NYDA needs to factor the revitalization of the Presidential Youth Working Group and initiation of its first convening under the 6th Administration, as the NYDA is one of the primary actors of influence, as per the PYWG Terms of Reference. The fast-tracking of the first sitting needs to take place.

The NYDA should play a role in working towards integrating young people in existing high-level institutional structures and platforms (such as; the Inter-Ministerial Committee's, Inter-Departmental Working Groups, National Inter-Governmental Coordination Forums, Presidential Working Groups); by granting young people observer status ; in order to realise 6.5.1 (b), (c ) and 6.5.2 (f) of the NYP 2030.

Training for the roll-out of the IYDS should be facilitated by NYDA in collaboration with Provinces and municipalities to ensure that key decisions are made collaboratively. It is essential to engage with municipalities to allow for alignment in the Integrated Development Plans (IDPs).

Strategic Outcome	Actions	Lead Implementation Agent	Indicators	2022/25	Baseline
Improved leadership, governance and accountability	Coordinate engagements between leadership of the executive, legislature and judiciary on strengthening state governance and public accountability	DOJ Presidency DPME	Social compact between the Executive, Judiciary and Legislative tiers of Government	A social compact developed by 2021 and implemented by 2024	New indicator
	Rationalise governance system in the public sector	DPME DCOG DPSA	Institutional model for intergovernmental and interdepartmental coordination developed	National cluster system, IMCs and implementation forums reviewed by March 2020	New indicator
	Enable leadership in national and provincial departments to build capacity and also intervene to resolve blockages in government bodies and administrations	DPME	Sections 100 & 139 Monitoring and Intervention Bill drafted and approved by Parliament	Sections 100 & 139 Monitoring and Intervention Act in place by 2022	IMC interventions, issues of national concern and previous Section 100 and 139 interventions.

-------------------------------	----------------	---	---	--	---------------

## 5.6 Recommendations

Given that government planning is concluded in March, some of the proposals may have to be advocated for during planning cycle of government. This view arises from the understanding that the NYDA will provide reports on the implementation of IYDS based on the reports that will be collected from various organisations as per MTSF. The proposals may have to be renegotiated as the current legislation does not grant the NYDA power to tell state organs to implement programmes. The proposals made during consultations include amongst others:

1. Introduce Basic Universal Income (BIG) for the unemployed Youth
2. Develop programmes to support informal sector/survivalist entrepreneurs
3. The establishment of youth quotas for the public sector framework aimed at mandating government to adopt clear targets to ensure improved and evident representation of young people in leadership and executive positions within its departments, ensure reflective youth representation in public service Boards and Boards of State-Owned Enterprises and other key public service leadership structures
4. Active participation of the NYDA in sector-specific youth strategies developed by other state organs
5. The Commission for the Promotion and Protection of the Rights of Cultural, Religious and Linguistic Communities must be evaluated by an external peer commission knowledgeable on South Africa's religious environment
6. Representation of all genders and sexualities in all three tiers of government, especially in executive spaces like the Office of the Presidency, should be increased
7. Establishment and development of a National Guideline on Meaningful Youth Engagement, for government, business, and civil society sector stakeholders to engage on best practices
8. Proposed youth Implementation Framework National Working Team to monitor and advocate for the implantation of NYP
9. The NYDA should play a role in working towards integrating young people in existing high-level institutional structures and platforms (such as; the Inter-Ministerial Committee's, Inter-Departmental Working Groups, National Inter-Governmental Coordination Forums, Presidential Working Groups); by granting young people observer status ; in order to realise 6.5.1 (b), (c) and 6.5.2 (f) of the NYP 2030

# 1000 Youth Owned Enterprises IN 100 DAYS

## LONA XUBA - XUBA TRAILERS

Miss Lona Xuba is an 18 years old female from Ekurhuleni and a founder of Xuba Trailers. The business hires out trailers to people that are moving furniture when relocating and to taxi drivers that travel long distances. She identified a gap in the market when she noticed an increase in the number of room rentals in her community and this meant more people in need of furniture removal services. Lona started her business with one (1) trailer and when the demand for her services grew, she approached the NYDA for funding to purchase additional trailers. Lona received funding to the value of R30 000,00 to purchase three (3) more trailers for her business. Xuba Trailers is marketed through word of mouth and it has two (2) full time employees. Lona's dream is to employ more young people when her business grows.

## THABANG MABEL LEZIN - SCENTS (PTY) LTD

AT SCENTS (PTY) LTD is a youth-owned business located in Johannesburg, Free State. Owner, Thabang Lezin started her cosmetics company in order to provide a diverse line of fragrances packaged under their own brand for their target market. When AT SCENTS Cosmetics started operating, fragrances were manufactured from Thabang's home and due to the growth and demand, the company has since moved to Pretoria. Direct selling, social selling, and effective marketing contributed to the company's growth and expansion. Thabang profits from the quality of each of her fragrances which has given AT SCENTS Cosmetics a competitive advantage in the market. Moreover, the company purchases raw material from accredited suppliers and do their own manufacturing of the fragrances. The company received a total of R4 000,00 worth of NYDA grant funding to purchase raw material and equipment. To date, AT SCENTS Cosmetics has made considerable growth in the local market around Johannesburg and surrounding areas within the Free State Province. Quality made good product and professionalism, AT SCENTS Cosmetics is bound to continue to flourish in the market.

## NOMPUNDO SPELMAAN - ASAMBEN RECORDS

Nompundo Spelman (20) grew up in Mafikeng Township in East London and always dreamt of having her own recording label business. She managed to learn about music and recording which led to her setting up an informal business from home. Back then she would offer her services at no cost to young aspiring artists as she didn't have all the necessary recording equipment. She then approached the NYDA East London Branch seeking assistance regarding her business. She was advised to register her business and was taken through the grant application process. Post the registration of her business, Asamben Records also received grant funding to the value of R49 907,00 to buy the necessary equipment that she needed for her business to be a success. Nompundo encourages other young aspiring entrepreneurs not to doubt their ideas but must believe in themselves and keep adapting their ideas as that they are relevant in the digital age.

## **Institutional Arrangements**

## 6. Institutional Arrangements

The critical success factor for the implementation of the IYDS is the proper design and deployment of effective and efficient institutional arrangements model. Institutional arrangements are the policies, systems, and processes that organisations use to legislate, plan, manage and coordinate their activities in order to fulfil their mandate. Although the NYDA is tasked with the development of the IYDS, its implementation is not the sole responsibility of the agency. As a countrywide strategy, collective responsibility by the youth sector is required to implement the IYDS. The document is deliberately structured to make it easy for the public and private sector organisations to participate. Once the areas of intervention have been identified, the role of each stakeholders will be clearer. The main role of the NYDA is to act as a catalyst.

### 6.1. Financial Investment support from National Treasury

National Treasury is prescriptive about the process to be followed for the development of programmes and project budgets. The Medium-Term Expenditure Framework (MTEF) provides detailed budget projections for the next three financial years with all budgetary allocations linked to specific programmes. Projects and all budgetary expenditure must be linked back to programme and project delivery. Budget programme structures provide the key link between an institution's objectives and its detailed operational budgets. To provide this link, the budget programme structure (programmes and sub-programmes) should reflect the main areas of responsibility or service delivery within an institution's mandate. The framework for engagement, interactions and delivery of programmes being delivered through the IYDS, will require the National Treasury department to be involved. It is presently not possible to identify exactly what changes will be required, but some of the principles being considered are:

**Private sector to easily invest:** There may be instances where private sector organisations may want to make financial contributions directly to identified programmes and projects. Should a treasury mechanism not exist for this to be done, then one will need to be introduced. Once the funding (co-funding either match or other) has been received, the necessary systems and structures need to be established to make certain that the funds are managed correctly. Decisions need to be made on who will manage this budget, either by the line department or by treasury directly. The requirement is, therefore, for responsive, flexible, innovative methods to be employed.

**Structural reorientation:** There is a need for the NYDA to have structural representation on all planning committees. Where there is no committee in place, the NYDA must, at the very least, be an integral part of the planning processes (particularly where the youth issues are discussed).

**Opportunities for investment to be published (easy access point):** Once programme and project budgets have been developed, it will be necessary to publish all opportunities for private sector investment and involvement. The national treasury department will provide assistance on calculating the budget requirements/shortfall. This shortfall could then be met by partnering with a private sector or civil society organisations. There is a need to make the opportunities easily visible and accessible. The mechanism for access could take on a number of forms, with contact centers or discipline-specific desks being set up in the Presidency. The specific selection will be made once the volume of requests is better understood.

**Joint internal funding:** There may be instances where the budgets of two departments will be combined in order to realize optimal budget utilization. The existing treasury regulations will have to be reviewed to ascertain if this is possible through the “merging” of two “line departments” budgets in project-specific areas.

## 6.2. Catalytic Role of the NYDA

The IYDS has been designed as a strategy that any role-player could get involved in at any point in time. The primary role of the NYDA within this strategy is to act as a catalyst. Support of the Office of the Presidency, the NYDA is able to create the political will and momentum within Government. This could allow the IYDS to gain the traction that is required for successful implementation. The opportunity to influence other Departments’ youth development programmes, must be driven by both the NYDA and the Presidency. Interactions and consultations with the youth sector suggest that the current institutional arrangements are weak and need to be revisited. The main aim is to make youth development part and parcel of what other line departments are delivering, to the point where organisational and individual performance agreements include youth development. The role is, therefore, to remove barriers to success and to assist with the development and delivery of critical success factor. Their role can broadly be described as to:

- Provide planning and decision-making information for projects
- Coordinate key engagements
- Facilitate critical discussions and to ease projects through conceptualisation into design and ultimately implementation
- Establish key partnerships with private sector organisations at national, provincial and local levels
- Monitoring, evaluation and reporting requirements of the liaison function Integrated

### Treasury Advisory Support Services (Treasury)

National Treasury engagement was touched on briefly above, but it is envisaged that there will be high levels of involvement from the Department, since some of the

major considerations will be about how they provide innovative solutions for utilizing private sector funding. Public and Private Partnerships (PPP) are already a model that is used by the Department. The suitability of this mechanism needs to be investigated. Should it not be possible to deliver through the PPP model, then alternatives will have to be designed, considered and implemented.

**Inter-governmental Liaison (IGL) (from within NYDA)** Many of the social, health, and education service delivery challenges being faced by the national government cut across departmental mandates. For example, both the Department of Health (DoH) and the Department Social Development (DSD) are responding to substance abuse. The role of the IGL is to collect, collate and present information on all departments (and organs of state) and the projects they are running with the aim of presenting opportunities for collaboration. In addition, the IGL role include all monitoring, evaluation and reporting requirements.

### **NYDA Private Sector Liaison**

The role of the private sector liaison desk is to act as a single point of entry into the IYDS and related programmes/projects. Project information is important to identify when, where, and how private sector companies can get involved. Essentially it presents a point of entry into any programme or project focused on youth development run by Government. The IGL role also includes all monitoring, evaluation, and reporting requirements of the liaison function.

### **Knowledge Advisory Services**

A vast body of knowledge and information on youth development resides outside of the NYDA. With the National Treasury's emphasis on results-based management and evidence-based planning, it is very important that the NYDA form strategic partnerships that will provide them with access to these bodies of knowledge. The main targets for these partnerships are public and private research institutes as well as universities.

### **Marketing, Communication and Public Relations (multiple locations driven by NYDA)**

The IYDS represents a considerable departure from how the nation traditionally organised its response to youth development. Currently, the approach is thoroughly integrated and requires coordination and collaboration between the public, the private sectors and the civil society. The role-players are still the same, but the 'rules of engagement' have changed. In order to ensure that everybody understands how the landscape has changed, it will be necessary to have a strong marketing, communications and media campaign.

### **Civil Society Liaison**

The civil society liaison is the same as the private sector liaison. The only difference being the 'customer' base that they service.

## APPENDIX A: Overview of legislation that impacts on youth development

Legislation	Brief Description
<b>Policy Mandate</b>	
<p>The Constitution of the Republic of South Africa (Act 108 of 1996)</p>	<p>The Constitution is the supreme law of the country that entrenches specific rights, responsibilities and an ethos that everyone in South African must uphold. In the Bill of Rights, specific human rights are guaranteed and these rights and responsibilities guide the inherent rights and responsibilities of everyone, including youth. Socio-economic rights like the right to education, to health, and to livelihood are entrenched.</p>
<p>The National Development Plan (NDP)</p>	<p>The NDP is a plan to unite South Africans, unleash the energies of its citizens, grow an inclusive economy, build capabilities, and enhance the capability of the state and leaders working together to solve complex problems.</p> <p>The National Development Plan (NDP) offers a long-term perspective. It defines a desired destination and identifies the role different sectors of society need to play to reach that goal.</p> <p>As a long-term strategic plan, it serves four broad objectives:</p> <ul style="list-style-type: none"> <li>• Providing overarching goals for what we want to achieve by 2030.</li> <li>• Building consensus on the key obstacles to us achieving these goals and what needs to be done to overcome those obstacles.</li> <li>• Providing a shared long-term strategic framework within which more detailed planning can take place in order to advance the long-term goals set out in the NDP.</li> <li>• Creating a basis for making choices about how best to use limited resources.</li> </ul> <p>The Plan aims to ensure that all South Africans attain a decent standard of living through the elimination of poverty and reduction of inequality. The core elements of a decent standard of living identified in the Plan are:</p>

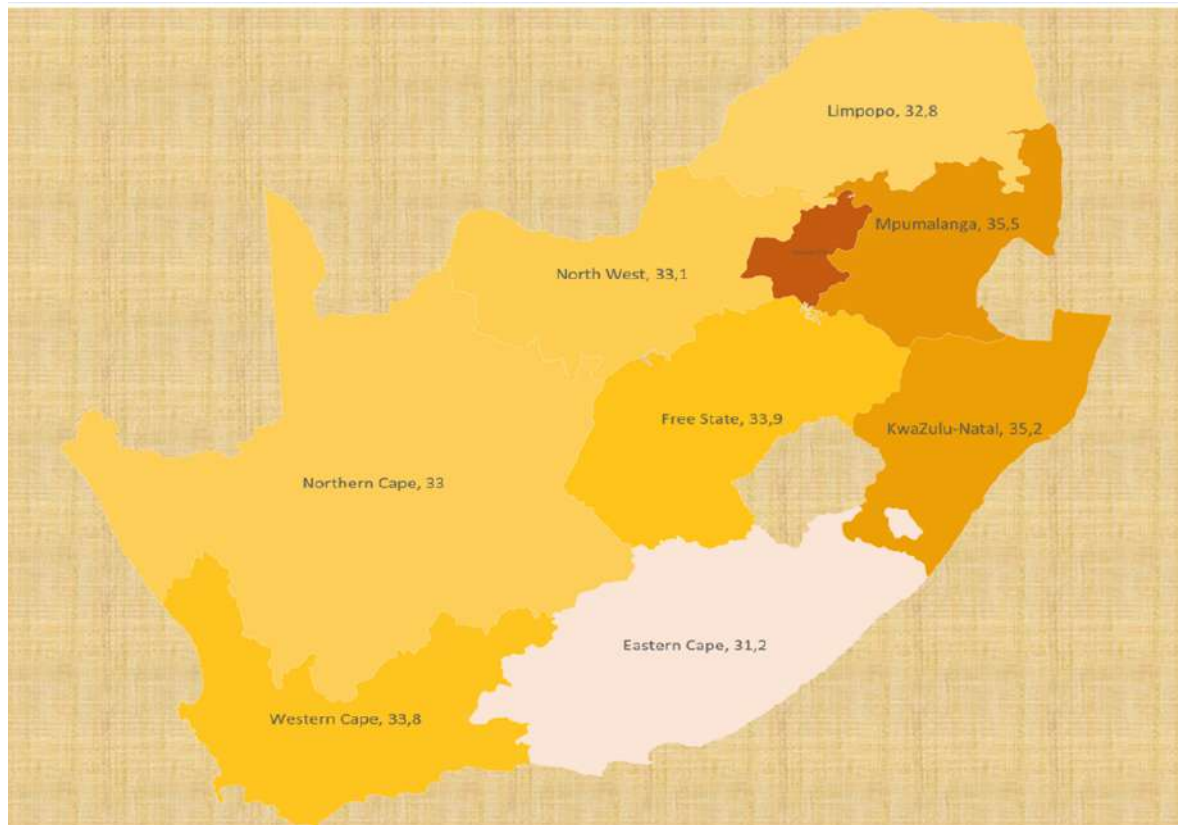

Legislation	Brief Description
<b>Policy Mandate</b>	
	<ul style="list-style-type: none"> <li>• Housing, water, electricity and sanitation</li> <li>• Safe and reliable public transport</li> <li>• Quality education and skills development</li> <li>• Safety and security</li> <li>• Quality health care</li> <li>• Social protection</li> <li>• Employment</li> <li>• Recreation and leisure</li> <li>• Clean environment</li> <li>• Adequate nutrition</li> </ul>
<p>Preferential Procurement Policy Framework Act (2000)/Preferential Procurement Regulation (2017)</p>	<p>Preferential procurement in South Africa is not only about proper financial management of public monies, it also presents an opportunity for government to correct the socio-economic imbalances of the past by awarding government work to individuals or institutions disadvantaged by historical practices.</p> <p>The purpose of this act is to enhance the participation of historically disadvantaged Individuals (HDIs) and the small, medium and micro enterprises (SMMEs) in the public sector procurement system.</p> <p>Procurement is regulated in the South African Constitution in the provisions dealing with general financial matters, imposing certain obligations on government entities to ensure the proper and responsible expenditure of public funds. The South African Constitution requires that when government entities engage in any</p>

Legislation	Brief Description
<b>Policy Mandate</b>	
	<p>procurement they must comply with five key principles set out in the Constitution. These five pillars stipulate that the procurement process must be equitable, transparent, fair, competitive and also result in cost-effectiveness for that public institution.</p>
<p>The New Growth Path (2011)</p>	<p>This emphasises the need for the state to create jobs through:</p> <ul style="list-style-type: none"> <li>• direct employment schemes</li> <li>• targeted subsidies and an</li> <li>• expansionary macro-economic package</li> <li>• supporting labour absorption activities</li> <li>• generate large-scale employment</li> <li>• create of incentives and support mechanisms to encourage the private sector to invest in new ventures</li> <li>• extend existing operations and concentrating resources in areas that yield the most jobs will ensure the greatest impact</li> </ul>
<p>National Youth Development Agency (NYDA), Act Number 54 of 2008</p>	<p>NYDA to develop an integrated youth development plan and strategy for South Africa.</p> <p>It must initiate, design, coordinate, design, evaluate and monitor all programmes aimed at integrating the youth in the economy and society in general</p>

Legislation	Brief Description
<b>Policy Mandate</b>	
<p>Broad Based Black Economic Empowerment Act 53 of 2003</p>	<p>Promotes achievement of constitutional right to:</p> <ul style="list-style-type: none"> <li>• equality through redress</li> <li>• increase in broad based and effective participation of black people in the economy</li> <li>• promote equal opportunity and equal access to government services</li> </ul>
<p>Skills Development Act of 1998 (as Amended in 2010)</p>	<p>This emphasises the state to promote the following amongst others:</p> <ul style="list-style-type: none"> <li>• to improve the quality of life of workers, their prospects of work and labour mobility;</li> <li>• to improve productivity in the workplace and the competitiveness of employers;</li> <li>• Establishment of national Skills authority</li> <li>• Establishment of SETAs</li> <li>• to improve self-empowerment; and</li> <li>• to improve the delivery of social services</li> </ul>
